<p>NARRATIVE: The Battlefield Combat Identification System (BCIS) is an all weather, day/night, millimeter wave, Low Probability of Intercept/Low Probability of Detection (LPI/LPD), digitally encrypted question and answer system that provides positive identification of friendly platforms out to 5.5 km (clear weather). BCIS was developed to minimize fratricide while maximizing combat effectiveness given rapidly changing and intense tactical situations. BCIS provides positive identification of friendly platforms to aid the gunner or commander to make a rapid shoot/don't shoot decision at the point of engagement. BCIS also provides short range, LPI/LPD situational awareness messages at the platoon level. Any target identification data received by BCIS will be sent through the platform Force XXI Battle Command Brigade and Below (FBCB2) to update the situational awareness database. BCIS has been designated as an Army Horizontal Technology Integration (HTI) Modernization program and coordinates A-kit integration with 27 host platforms. The BCIS program has been approved to enter Low Rate Initial Production (LRIP) to field to the Army's 4th Infantry Division (ID).</p> <p>JUSTIFICATION: The BCIS is an integral component to the Brigade Combat Teams under the Army's transformation strategy and of the Army's initiative to digitize the battlefield. Performance results from the Army Task Force XXI Advanced Warfighting Experiment (AWE) indicate that situational awareness (SA) in its current form is insufficient to prevent fratricide by itself, therefore, a target identification (TI) capability (BCIS) is required. FY01 funding procures BCIS interrogator/transponder and transponder only variants to support fielding to the 1st Brigade of the Army's 4th ID. First Unit Equipped (FUE) is planned for 3QFY02. Funding also supports a brigade size force-on-force simulation effort to determine a BCIS combat effectiveness capability.</p>

<p>DESCRIPTION: Provides Joint Staff directed Army share of funds to equip the Joint Communications Support Element (JCSE). The JCSE is a unique, completely mobile multi-service communications unit which provides support to the Unified and Specified Commands at the direction of the Joint Staff. The JCSE has the capability to deploy to any location and provide simultaneous communications support to two Joint Task Force (JTF) Headquarters and two Joint Special Operations Task Force (JSOTF) Headquarters involved in worldwide contingency operations or disaster relief/evacuation activities. JCSE also augments or provides contingency emergency communications support to meet the critical operations needs of the Joint Staff, the Services, defense and/or civil agencies, etc. and on a non-interference basis, provides communications support for joint readiness exercises. Equipment to be procured includes wideband microwave radio systems, packet switching nodes, line termination modules for Echelons Above Corps switches, Demand Assigned Multiple Access satellite radios, MILSTAR radios, Asynchronous Transfer Mode (ATM) switching nodes and upgrades to existing systems.</p> <p>JUSTIFICATION: Equipment requirements are approved by the JCS and assigned to the respective Services for procurement through the Army as the Executive Acquisition Agent.</p>

DESCRIPTION: The Defense Satellite Communications System (DSCS) provides super high frequency (SHF) wideband and anti-jam (AJ) satellite communications supporting critical national strategic and tactical C3I requirements. It must be survivable during trans- and post- nuclear attack to support communications essential to national survival. The DSCS supports the Army warfighter as well as the unique and vital Department of Defense (DOD) and non-DOD users, as approved by the Joint Staff and/or Secretary of Defense (SECDEF). The DSCS is used in conjunction with the Terrestrial Transmissions of the Defense Information System Network (DISN) and other communications systems to provide end-to-end communications. The DSCS provides long-haul service between the Continental United States (CONUS) and overseas locations.

JUSTIFICATION: Funds are required to support various requirements of the National Command Authorities (NCA), Commanders in Chief (CINCs), White House Communications Agency (WHCA), Navy C2, NATO, UK, and Diplomatic Telecommunications Service (DTS) as directed by the Office of the Joint Chiefs of Staff (OJCS).

FY01 JRSC funds will provide for the continued acquisition and fielding of the Universal Modem System (UMS). FY01 Mod of In-Service equipment funds provide for procuring the AN/GSC-52 installation kits and retrofitting other DSCS terminals. FY01 DSCS Operations Control System (DOCS) funds complete the procurement of the Replacement BATSON, Replacement DSCS FDMA Control Subsystem (RDFCS), as well as the DSCS Spectrum Management System (DSMS) and DOCS Training System (DTS) programs and continues procurement of Operational Databases. FY01 Digital Equipment funds will provide for continued fabrication of racks and components and their integration into DSCS. FY01 Interconnect Facility (ICF) funds will continue to accomplish DISA and JCS directed satellite ground terminal relocations supporting realignment of U.S. forces worldwide. In addition, FY01 funds will annualize engineering, matrix, and fielding support for current and prior year DSCS procurements.

DESCRIPTION: The Defense Satellite Communications System (DSCS) is a subset of the entire Defense Communications System (DCS). The Army DSCS provides research, development, and procurement of the ground segment portion of all strategic satellite communications systems. This equipment accepts voice frequency and digital data from other terrestrial ground systems, i.e., telephone, telephone switching centers, Defense Data Network (DDN), Defense Switched Network (DSN), Secure Voice Communications and microwave, and converts the aggregate user signals into a digital signal which is then transmitted to its recipients utilizing DSCS satellites that are in geostationary earth orbits for worldwide coverage. This long haul strategic military communications system utilizes equipment that makes maximum use of multiplexing, modulation, and coding techniques in order to maximize satellite utilization. This equipment is integrated into the Digital Communications Satellite Subsystem (DCSS) which is a system of electronic racks integrated into a varized or fixed configuration.

JUSTIFICATION: The DSCS Program must be sustained through the year 2010 to support projected operational needs of the Warfighter. A sustainment program has been established for the DCSS to increase supportability and efficiency while decreasing space, power, and personnel requirements. FY01 funds provide for fabrication of racks and their integration into the DSCS. These racks support the Jam Resistant Secure Communications (JRSC), and global Tri-Service Frequency Division Multiple Access (FDMA) earth terminal communications requirements. These JRSC racks and FDMA racks provide the maximum efficiency in long-range communications by integrating all digital communications network control, and anti-jam secure communications in one system. The DCSS provides for the fabrication of racks and equipment to field the Strategic/Tactical Gateways, the primary means of interoperable communications providing tactical warfighters global connectivity with each other and with strategic commanders, CINCs, and the Pentagon. The Multiplexer Integration and DCSS Automation System will provide backward compatibility with the existing tactical infrastructure while providing technology insertion. FY01 also continues the 8-PSK (phase shift keying) modem procurement.

DESCRIPTION: This program executes the Army's responsibility to install and relocate strategic Defense Satellite Communications System (DSCS) satellite communications earth terminals procured by Product Manager, DSCS Terminals and digital communications equipment procured and packaged by Assistant Project Manager, Digital Communications Satellite Subsystem. For the Army, this program also designs, procures and installs the interconnection facility to interface this equipment with existing Technical Control and Special User Facilities.

JUSTIFICATION: FY01 funds buy equipment in support of Defense Information Systems Agency (DISA) and Joint Chiefs of Staff (JCS) directed satellite ground terminal relocations supporting the realignment of US Forces worldwide. Reduced overseas manning and the refocus of US interests to areas such as Southwest Asia requires a major shift of key strategic satellite ground resources to support new areas of interest and troop dispositions. Additionally, sustaining the Defense Satellite Communications System (DSCS) requires marginally operational systems to be replaced by newer equipment.

DESCRIPTION: The Jam Resistant Secure Communications (JRSC) provides communications connectivity that will survive jamming and high altitude nuclear events which cause High-Altitude Electromagnetic Pulse (HEMP) and other perturbed atmospheric conditions. In FY01, the Universal Modern System (UMS) is the only funded program. The other identified anti-jam systems have already been acquired. The UMS will enable strategic and tactical forces under the command of the U.S., U.K. and NATO to have interoperable voice and digital data satellite communications capability under jamming and nuclear scintillation, while using non-processing transponders of the DSCS III, NATO or SKYNET 4 satellite systems.

JUSTIFICATION: FY01 funds provide for the fielding, PPSS and technical support of the UMS.

DESCRIPTION: The Defense Satellite Communications System (DSCS) Operations Control System (DOCS) provides for the management of DSCS earth terminal and satellite resources, which is required for rapid and efficient reaction to operational needs in support of the warfighter. DOCS is made up of a number of semi-automated subsystems which configure, monitor, maintain, and restore all communications links, and automatically control operations over these links. The Objective DSCS Operations Center (ODOC) will modernize the existing DOCS subsystems to provide improved satellite communications to Ground Mobile Forces and Strategic users. It will replace the existing (largely manual) control system, provide greatly enhanced responsive system control, reduce the number of personnel required, and increase overall system availability with associated reductions in operations and maintenance costs. DOCS supports control of the satellite payload, satellite communications network planning, satellite communications link performance monitoring, and control of ground satellite terminals. DOCS assures reliable satellite communications networks to support unique user mission requirements vital to national security under stressed and unstressed conditions.

JUSTIFICATION: FY01 funds RDFCS software requirements to include spectrum monitoring capability, RSCCE Operational Databases and DOCS Training System (DTS) software modules. RDFCS is required to provide automatic power level control of FDMA links. This allows operation of FDMA links with reduced power margins without sacrificing link quality. The net result is more communications capabilities for the warfighter. RDFCS will also include advanced Digital Signal Processing techniques to provide rapid characterization of transponder utilization and time analysis to keep satellite services on line and optimized. Operational Databases are satellite unique databases required for command and control of DSCS III satellites. DTS is emulation/simulation software modules used to train personnel (MOS 31S) on both new and upgraded DOCS subsystems. FY01 also funds annualized engineering, matrix, system integration, and fielding support of current and prior year procurements.

<p>DESCRIPTION: These modifications will modernize the aging AN/GSC-52 medium terminal (MT) so that all Defense Satellite Communications System (DSCS) Super High Frequency (SHF) strategic earth terminals use common electronics and logistics support. The result will extend the life of the terminals, increase readiness, reduce training and logistics support, conserve energy and improve maintainability. This modernization effort will eliminate system obsolescence, modernize existing equipment and provide component commonality with other existing strategic terminals.</p> <p>JUSTIFICATION: FY01 funds are required to procure the second and third options for the AN/GSC-52 installation kits and components that are common to the other DSCS satellite terminals.</p>

INDIVIDUAL MODIFICATION												
										Date	February 2000	
MODIFICATION TITLE: AN/GSC-52 Modernization 1-89-07-0030												
MODELS OF SYSTEMS AFFECTED: AN/GSC-52 Modernization												
DESCRIPTION / JUSTIFICATION: <p>The modernization effort of the AN/GSC-52 System will eliminate obsolescence, modernize the existing equipment and provide commonality with other existing terminals. The acquisition strategy consists of a two contract approach. In FY97, components which are common to the AN/GSC-39 and AN/FSC-78/79 terminals were purchased from an existing contractual vehicle as a cost effective means to insure component commonality for these DSCS Terminals. A contract was awarded in FY98 for the production of installation kits and installation of the AN/GSC-52 hardware. The guidance was directed by DISA DSCS Program Plan FY93-98, dated January 1994. FY99 funds continue the acquisition of AN/GSC-52 installation kits and continue the procurement of common components.</p>												
DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: <p>FY01 funds are required to continue the acquisition of AN/GSC-52 installation kits and continue the acquisition of common components.</p>

INDIVIDUAL MODIFICATION																																																																																																																																																																																															
													Date	February 2000																																																																																																																																																																																	
MODIFICATION TITLE: Terminal Modernization 1-89-07-0005																																																																																																																																																																																															
MODELS OF SYSTEMS AFFECTED: AN/FSC-78/79, AN/GSC-39, and AN/TSC-86																																																																																																																																																																																															
DESCRIPTION / JUSTIFICATION: <p>The AN/FSC-78/79 Heavy Terminal (HT), and AN/GSC-39 Medium Terminal (MT) began operation in the mid-70's & have surpassed their 15 year design life. The original systems were fielded with a required Mean Time Between Failures (MTBF) of 1,000 hours. Due to aging, the MTBF degraded significantly. The Terminal Mod program eliminates system obsolescence and enables the terminals to achieve the required 1,000 hours MTBF. The contract was awarded in Mar 92 for this modernization effort, which provides for upgrading of aging electronics in HT/MT satellite earth terminals so all Defense Satellite Communications Systems (DSCS) Super High Frequency (SHF) strategic earth terminals will use common electronics & logistics support. The result extends the life of the terminals for another 15 years, enhances operational readiness, reduces training & logistics support, conserves energy & improves maintainability. This Tri-Service DOD Program was approved in the FY91-95 DSCS Program Plan, Jun 89.</p>																																																																																																																																																																																															
DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: <p>No specific HT/MT Acquisitions in FY01.</p>

DESCRIPTION: Super High Frequency (SHF) Tri-Band Advanced Range Extension Terminal (STAR-T) is a Heavy High Mobility Multi-purpose Wheeled Vehicle (HMMWV) mounted, multi-channel Tactical Satellite Terminal (TACSAT). It has a tri-band capability in the Super High Frequency (SHF) range and will operate over commercial and military SHF satellites. Selected terminals will also have an integrated switch that will interface with both commercial and joint military switching systems. The STAR-T is also being procured by the USMC and the Joint Communications Support Element (JCSE). This program will replace the aging fleet of AN/TSC-85/93 terminals by providing Tri-Band communications capability for split based operations. The AN/TSC-85/93 terminals cannot meet the transportability and deployability requirements of a force projection Army, nor can they exploit commercial space as mandated by OSD. Prolonging the life of these terminals would result in rapidly escalating maintenance costs which negatively impact upon the O&M budget. The STAR-T will selectively replace the Ground Mobile Forces (GMF) terminals at Echelons Above Corps (EAC).

JUSTIFICATION: In FY01 funds will procure thirteen STAR-T terminals.

<p>DESCRIPTION: The Enhanced Manpack UHF Terminal (i.e., EMUT and also known as Spitfire) program replaces the existing inventory of single channel SATCOM radios to add Communications Security (COMSEC), and Demand Assigned Multiple Access (DAMA) capability to support all DoD, Special Operations Forces (SOF) and other Agencies. The Spitfire is a small, lightweight manpack radio that provides the reach-back capability between the forward deployed force and the Continental United States sustaining base required to support power projection. Joint Staff (JS) has mandated that all UHF satellite manpack terminals be secure and have DAMA capability. The Army has designated the SPITFIRE terminal as the standard UHF Satellite Terminal. The SPITFIRE possesses the UHF DAMA capability which allows more efficient use of limited satellite resources.</p> <p>JUSTIFICATION: FY01 funding will field SPITFIRE prior year procurements.</p>

DESCRIPTION:
The Navstar Global Positioning System (GPS) is a passive space based radio positioning and navigation system that provides position, velocity and time information to a user in three dimensions to 16 meters Spherical Error Probable (SEP). GPS User Equipment (UE) is a family of receivers that meet DoD requirements for Selective Availability and Anti-Spoofing, provides the users with Precise Positioning Service (PPS), and is designed to accommodate the differing dynamic user environments to include handheld as well as host platforms. The Army acquisition strategy is to procure a mix of Non-Developmental Item (NDI) equipment that will satisfy all user/platform requirements while enforcing standardization in accordance with DoD policy. Current Army GPS UE includes the Miniaturized Airborne GPS Receiver (MAGR), (a NDI 5-channel set for Signal Warfare aircraft); the Precision Lightweight GPS Receiver (PLGR), (a NDI receiver for ground users and host vehicles); and the Stand Alone Air GPS Receiver (SAGR) and the Cargo Utility GPS Receiver (CUGR), (satisfy Army requirements for low dynamic Army aviation in the non-modernized fleet). Future Army GPS UE will include the Defense Advanced GPS Receiver (DAGR) (handheld); Miniaturized Airborne GPS Receiver 2000 (MAGR 2000); GPS Receiver Applications Module (GRAM) (embedded); and GPS/Inertial Navigation System (GPS/INS) (GPS with INS back-up). All new UE is scheduled for fielding to the Army during the FY02-FY10 timeframe and will include significant anti-jam and anti-spoof capabilities as a result of the ongoing Navigation Warfare (NAVWAR) Program.

JUSTIFICATION:
The FY-01 program will sustain office operations and allow for Army participation in the joint service efforts to enhance GPS receiver anti-jam and anti-spoof capabilities under the Navigation Warfare Program. Due to a revision in the DAGR Acquisition Strategy it was decided to defer DAGR production from FY01 to FY02. FY01 dollars have been redirected to fund the PLGR Warranty Extension. FY-01 funds will also fund CUGR installations and the PLGR Urgent Safety Software Fielding. The FY-02 program will allow for the procurement of the Defense Advanced GPS Receiver (DAGR).

DESCRIPTION:

SMART-T is a multi-channel satellite terminal required to support a Force Projection Army. It will provide range extension capability to the Army's Mobile Subscriber Equipment (MSE), a critical requirement demonstrated during Operation Desert Storm. Specifically, SMART-T will provide a satellite interface to permit uninterrupted voice/data communications as our advancing forces move beyond the MSE Line of Sight capability. These terminals will improve the battlefield capability with respect to Command, Control and Communications. SMART-T will provide connectivity between selected MSE Node Centers (NC), Large Extension Nodes (LEN), Small Extension Nodes (SEN), and Remote Radio Access Units (RAU), to support Echelons Corps and Below as well as Special Contingency Operations, and communicate with other service Milstar terminals. It will transmit in the Extremely High Frequency (EHF) band and will receive in Super High Frequency (SHF) band. The terminal will operate at both Medium Data Rate (MDR) and Low Data Rate (LDR). It will be capable of unattended operation. SMART-T will have the inherent capability of low probability of interception and low probability of detection (LPI/LPD) to avoid being targeted for destruction, jamming, or eavesdropping. SMART-T is interoperable with all other Milstar terminals and is interoperable with Milstar, Navy UHF Follow-on and any MIL-STD-1582C compatible payloads.

JUSTIFICATION:

FY01 funds procure 44 Full Rate Production (FRP) terminals and associated failure-free warranty for the US Army; completes Total Package Fielding of Low Rate Initial Production (LRIP) terminals to US Army; procures contractor logistics, fielding and training support services; conducts Milstar Intersegment Tests; acquires 7 Milstar Voice Conferencing terminals for the White House Communications Agency (WHCA). The SMART-T acquisition strategy was developed to optimize the fullest on-orbit capability of the Milstar Medium Data Rate (MDR) payload. SMART-T operates at Low Data Rate (LDR) on existing satellites. Operational capability will be maximized with the MDR satellite launch schedule estimated for June 2000. The SMART-T will be the only fielded Milstar MDR capable ground terminal at the time of the satellite launch.

DESCRIPTION:
The SCAMP BLK I Terminal will provide a manportable, four simultaneous channel, full duplex data/half duplex voice communications and data transfer system at 2400 bps each. These satellite terminals are to be employed by units that require range extension for command and control communications. Block I will provide priority tactical ground users with the capability to transmit and receive intelligence, command, and control traffic from a base station. It will transmit in the Extremely High Frequency (EHF) band and receive in the Super High Frequency (SHF) band. It will provide Low Data Rate (LDR) secure voice at 2400 bps and secure data at 75-2400 bps, as well as interface with Common Hardware/Software devices such as the Lightweight Computer Units and the Hand-Held Terminal Unit. The SCAMP BLK I will be fully interoperable within the Army C4I Technical Architecture. The terminal will have embedded COMSEC and TRANSEC with set-up and tear-down in less than 10 minutes. In addition to operation on Milstar satellites, the SCAMP BLK I will operate on all satellites which utilize the MIL-STD-1582C/D LDR waveform. It will be required to operate in environmental conditions that include smoke, aerosol, rain, fog, snow, haze and dust, and must operate in the transmit, receive or stand-by mode throughout an entire mission (typically 30 days). SCAMP BLK I is the first EHF manportable terminal and provides direct support to the tactical warfighter mobile forces with greater anti-jam protection, lower probability of intercept, and lower probability of detection. Army Block I terminals are designated for Commanders at Division and Above levels. SCAMP Block I provides manportable EHF/LDR communications using the on-orbit satellites, and future launches.

JUSTIFICATION:
FY01 funds Total Package Fielding (TPF) and New Equipment Training (NET) efforts for Army Block I terminals, supports Joint Intersegment and Warfighter Interoperability Tests, incorporates EHF system level changes and, procures Contractor Technical Support contract option.

DESCRIPTION:

Global Broadcast Service (GBS) is a joint service program that responds to the need for a high-speed, one-way broadcast of high volume multi-media information such as imagery, maps, weather data, logistics, air tasking orders, etc., to users worldwide. GBS is an integral part of the Defense Information Infrastructure (DII) and a part of the overall DoD Milsatcom architecture. The DoD GBS initiative was formalized by a Joint Acquisition Decision Memorandum, 27 Mar 96. The Army is the GBS Joint Project Office's (JPO) Integrated Product Team (IPT) lead for the Transportable Ground Receive Suites (TGRS) acquisition for all users. The Army is also the JPO IPT lead for the Theater Injection Points (TIP).

The GBS TGRS consist of a small satellite tracking and receiving antenna which receives and demodulates the RF downlink signal into a bit stream for the receive broadcast management computer to decrypt and distribute to end users. An in-theater injection capability via Theater Injection Points (TIPs) will be designed to broadcast vital Commander in Chief (CINC)/ Commander Joint Task Force (CJTF) in-theater information to in-theater TGRS. The need for the GBS communication system was validated by the Joint Requirements Oversight Committee (JROC) in a Joint Mission Need Statement, dated 3 Aug 95, and Joint Operational Requirements Document, dated 7 Apr 97. The GBS Phase II concept was validated by use of a GBS Phase I demonstration system in support of the Bosnia peace mission and Joint Warfighting Interoperability Demonstration (JWID) 95. The Army's objective is a total of three TIPS and 504 TGRS.

JUSTIFICATION:

FY 01 funds will procure 9 TGRS; and the third TIP, which is for European Command (EUCOM).

DESCRIPTION: This program will provide a tactical satellite communications capability to meet critical Ground Mobile Forces (GMF) Command, Control and Communication (C3) needs not satisfied by conventional terrestrial communications systems. The GMF are those components of the Army, Navy, Air Force, Marine Corps, Special Operations Forces and Joint Communications Support Element engaged in land, tactical air combat and amphibious operations ranging from single-service crisis missions to mutually supportive joint-service combat scenarios. Mod Of In-Svc Equipment (TACSAT) funds the upgrades to Army tactical satellite communications equipment.

JUSTIFICATION: The FY01 funds will be used to procure Secure Enroute Communications Package - Improved (SECOMP-I). This is a lightweight, highly compact, communications system designed for the use of Corps/Joint Task Force (JTF)/Army forces commanders and staff while deploying to a theater of operations onboard aircraft or while dismounted for ground operations. It provides long range, beyond line of sight and Very High Frequency (VHF) secure voice and data for Command, Control, Communications, Computers and Intelligence (C4I).

<p>DESCRIPTION: The Global Command and Control System-Army (GCCS-A) provides the Army's interface to the Joint Staff Global Command and Control System (GCCS) program. GCCS-A provides automated command and control tools for Army Strategic and Theater Commanders to enhance warfighter capabilities throughout the spectrum of conflict during joint and combined operations in support of the National Command Authority (NCA). GCCS-A is being implemented in accordance with the GCCS concept of Defense Information Infrastructure Common Operating Environment (DII COE) and the Army Battle Command System (ABCS) Capstone Requirements Document (CRD). The GCCS-A is the integration of software, hardware and communication architecture. GCCS-A is the Army's Strategic and Theater Command and Control (C2) System. It provides readiness, planning, mobilization and deployment capability information for the strategic commanders. For Theater commanders, GCCS-A provides Common Operational Picture (COP) and associated friendly and enemy status information, force employment planning and execution tools (receipt of forces, intra-theater planning, readiness, force tracking, onward movement, and execution status), and overall interoperability with Joint, Coalition and the tactical Army Battle Command Systems (ABCS). It will support major Army commands (MACOMS), Army Commanders in Chiefs (CINCs), Army Commands and Components, and Army elements within the Pentagon. The GCCS-A will support all staff sections within a headquarters that support all phases of conflict and Stability and Support Operations (SASO). Hardware fielding efforts through FY 00 will focus on equipping all Army-managed worldwide C2 sites. Beginning in FY 01, emphasis will be on upgrading previously fielded hardware to ensure consistency and compatibility with current technologies.</p> <p>JUSTIFICATION: FY 01 funds concentrate on technology insertion of previously fielded hardware as well as support completion of the procurement and fielding of GCCS-A at all Army-managed worldwide command and control sites. Fielding of GCCS-A is mandatory in order for the Army to remain in lock step with GCCS milestones, and support the Army Battle Command System.</p>

DESCRIPTION: The Army Data Distribution System (ADDS) is a Command, Control, and Communication (C3I) network consisting of the Data Radios Systems: Enhanced Position Location Reporting System (EPLRS), Near Term Digital Radio (NTDR), and Joint Tactical Radio System (JTRS). EPLRS is a direct outgrowth of the Army/United States Marine Corps (USMC) Position Locating Reporting System (PLRS) and provides battlefield commanders combat information on the position of their forces in addition to supporting the majority of the data communication needs of the Army's brigade & below tactical internet as part of the Army's battlefield digitization efforts. EPLRS is the critical Position/Location and data communications system providing Situational Awareness (SA) in both digitized and non-digitized divisions and corps until the FY 04 time frame. EPLRS provides: secure, jam-resistant, near real time communications support for the Battlefield Functional Areas of the Army and plays a critical role in support of the US Army's initiative to "Digitize the Battlefield" as the backbone communications data pipe at Brigade and Below for Force XXI Battle Command Brigade & Below (FBCB2) and the Tactical Internet. ADDS is essential to support tactical operations on the automated battlefield with reliable, real-time, secure, jam resistant data communications and position location capabilities. It has been designed specifically to meet the data communication requirements of emerging computer and sensor systems.

JUSTIFICATION:
EPLRS: FY 01 funding will allow the Army to procure 320 additional Enhanced PLRS User Unit (EPUU) Radio Sets (RSs) and continue the fielding of prior year hardware procurements to Contingency Corps units. FY 01 funding will also provide for New Equipment Training (NET), Installation Kits for Army prepositioned stock (APS-5), integration, Engineering Change Orders (ECOs), life cycle software engineering and program management support.

<p>DESCRIPTION:</p> <p>The Single Channel Ground and Airborne Radio System (SINGGARS) VHF-FM Radio Communications System provides the primary means of command and control for combat/combat support/combat service support units. The SINGGARS radio provides state-of-the-art communications in manpack, vehicle, and airborne configurations. Its Frequency-Hopping and jam resistant capabilities offset current threat jamming techniques. SINGGARS continues its evolutionary development with the fielding of the Advanced SINGGARS System Improvement Program (ASIP) radio. The SINGGARS ASIP radio provides for enhanced data and voice communications while using commercial Internet Protocols. The SINGGARS radio is an essential component of the Tactical Internet enabling commanders to conduct operations on the digitized battlefield. The family of SINGGARS radios is employed on such systems as the Bradley M2A3, PATRIOT, ABRAMS M1A2SEP, and the Longbow Apache.</p> <p>JUSTIFICATION:</p> <p>Funding in FY 01 will provide for procurement of 304 airborne SIP radios for integration into Army digitized aviation platforms which include Kiowa Warrior (OH-58D (SSEP)), Longbow Apache (AH-64D), Medevac (UH-60Q), and Improved Cargo Helicopter (CH-47). FY 01 funding will also provide for procurement of SINGGARS test sets for Special Operational Forces and fielding of the ASIP ground radios which have previously been procured.</p>

DESCRIPTION:
 FY98/99 funds 2 separate components in accordance with transfer of PM JTACS equipments to US Army Communications Electronics Command (CECOM), as follows:
 (1) Funding for Project Manager, Warfighter Information Network-Terrestrial (PM WIN-T) to support personnel/equipments negotiated to remain with the new PM; the WIN is a total information system architecture that supports requirements of the Digitized Force XXI. WIN is the architecture that will seamlessly link our diverse information resources into a network Army warfighters can use on the 21st century's digitized battlefield and (2) Funding for CECOM Special Project Office, JTACS Systems Branch, and completion of Level II projects. Effective FY 00, allotment belongs to CECOM only. This line supports the Legacy Systems of the Area Common User System-Modernization Plan (ACUS-MP) which is comprised of the Communication Networks, which evolved from the original Tri Service Tactical Communications and Mobile Subscriber Equipment.

JUSTIFICATION:
 CECOM/JTACS Systems Branch Allocation-FY00/01 funds are required to provide Level II Project Management of equipments transferred from PM JTACS/WIN-T to CECOM.

DESCRIPTION:
The ACUS MOD PROGRAM (WIN-T) line funds the ongoing and planned modifications to the Area Common User System (ACUS) and supports its migration to the Army's Warfighter Information Network (WIN) systems architecture. The WIN is a total information system architecture that supports the requirements of the Digitized Force XXI and the Army Vision. WIN is the architecture that will seamlessly link diverse information resources into a network the Army warfighters can use on the 21st century's digitized battlefield. The ACUS-MP consists of planned upgrades for the Mobile Subscriber Equipment (MSE) system in Echelons Corps and Below (ECB) and Tri-Services Tactical Communications (TRI-TAC) system in Echelons Above Corps (EAC). The Switch Modernization effort is the production and fielding effort to upgrade the legacy area common user system switches with Asynchronous Transfer Mode (ATM) capable switches throughout the Army. The Radio Modernization effort provides increased transmission pipes between switches to move voice, video, data, collaborative planning, etc. on the digitized battlefield. Also included are spares and training devices to support the above mentioned upgrades. The objective is for a Force Package (FP), with a supporting slice to be fielded every three years after the First Digitized Division (FDD) in FY00 and First Digitized Corps (FDC) in FY04 and migrate towards the objective WIN architecture. The Tactical High Speed Data Network (THSDN) effort is an immediate, interim solution, providing the minimum essential bandwidth necessary to support high speed data access through Mobile Subscriber Equipment to the Brigade TOC. The objective is to field these components to all signal units within the Army other than ATM equipped signal units by FY02 to bridge to the Warfighter Information Network. This line also supports downsizing ACUS legacy systems such as the AN/TTC-39D via the Single Shelter Switch program, and the Digital Group Multiplexer (DGM) equipment via the High Mobility Digital Group Multiplexer Assemblage (HMDA) program. Objective improvements will include the network infrastructure of switching/routing systems, transmission and relay systems, network management, information assurance, subscriber services, and terminal devices.

This program is required to fund the fielding costs associated with a variety of Communications-Electronics (C-E) systems and efforts not identifiable to a current major system hardware line. Fielding costs include Total Package Fielding (TPF), New Equipment Training (NET), and First Destination Transportation (FDT). TPF efforts include validation of the Materiel Requirements List (MRL), depot staging costs, deprocessing, inventory, installation and handoff of all required equipment and materiel to gaining units. The funding shown for NET is to train the instructor and key personnel who then train the users in the field in operating and maintenance of CECOM managed equipment. FDT costs are those associated with the shipping of various C-E equipment from the contractor to the depot.

JUSTIFICATION

The primary efforts to be funded in FY01 are TPF/NET for C-E equipment requirements for the conversion of selected units. Funds will activate multiple brigades with MSE and TRI-TAC capabilities. These conversions are restructured in accordance with (IAW) a downsized force structure. The primary projected efforts to occur in FY01 is the conversion of MSE equipment and the conversion of MSE shelters from Digital Group Multiplexers (DGM) to the newer Transmission Interface Module (TIM) system MSE. These funds will ensure that critical round-out signal units are equipped for the mobile digitized battlefield with GO-TO-WAR systems.

<p>DESCRIPTION: The Soldier Enhancement Program procures items to ensure that our combat soldiers will increase their lethality, survivability, mobility, command and control, and sustainment. The Soldier Intercom (SI) and the Product Improved Combat Vehicle Crewman (PICVC) headset are two items currently being procured under this program. (1) The SI is a small voice radio with a tethered speaker/microphone for use by individuals within a squad to coordinate their movement. SI will allow squad members to communicate more effectively while conducting day/night combat operations over short distances without relying on hand and arm signals, particularly in Military Operations in Urban Terrain (MOUT). The SI is an inexpensive means of coordinating squad communication. The SI consists of a receiver/transmitter, antenna, speaker/microphone, and carrying case. (2) The PICVC is a second generation Active Noise Reduction (ANR) helmet providing speech intelligibility scores of 90% as well as over 10 decibels of greater hearing protection compared to the conventional DH-132 passive helmet. It consists of a headset with a talk-through capability and foam ear cushions, and a single piece microphone boom assembly.</p> <p>JUSTIFICATION: (1) Command and control through radios currently ends at the squad leader level. The SI will extend the ability of the squad leader to disseminate voice information to the members of the squad by using a small rugged, non-developmental radio. The FY01 funding continues to field the SI to non Land Warrior, Mounted Warrior, and Air Warrior forces. (2) During the Bradley Limit User Test (LUT) a major safety problem became evident. The CVC Headset was experiencing an Electromagnetic Interference (EMI) level that was several times greater than it was designed for. The replacement of the Combat Vehicle Crewman (CVC) with the PICVC will increase the EMI susceptibility level and eliminate the safety issue and allow the vehicles to operate without any operation restrictions.</p>

<p>DESCRIPTION: Medical Communication for Combat Casualty Care (MC4) is a capstone program which provides support to the medical force structure through the acquisition of existing digital communications equipment and existing/emerging information management/technology capabilities for modular hospital platforms and non-hospital units throughout the wartime theater of operations as well as peace operations, humanitarian assistance and operations in aid of civil authorities. MC4 will also integrate the Medical Information Systems into the Army Command and Control (C2) structure which is evolving to support Force XXI and the Army 2010 and beyond. Planned procurements support medical functionalities of Army Digitization efforts at Ft. Hood, Texas.</p> <p>JUSTIFICATION: MC4 inserts available and emerging technologies into existing platforms and provides enhanced tactical communications capabilities to enhance combat medical treatment and care. MC4 will also procure, field and integrate automation infrastructure for Army users of the Joint Theater Medical Information Program (TMIP). FY01 funding supports procurement and fielding of information management/information technology to enhance far forward combat casualty care within the First Digitized Division and Corps.</p> <p>FY01-05 funding profile reflects the Information Technology transfer among the OMA/RDTE/OPA appropriations.</p>

DESCRIPTION: The program provides the Army with an advanced global ADP architecture and its inherent capabilities for Counterintelligence (CI) support to DOD decision makers across the spectrum of conflict. Program resources efforts that enable CI assets to provide the deployed Land Component Commander with time-sensitive CI force protection support.

JUSTIFICATION: Funding is required to support the development and recapitalization of the Defense Counterintelligence Integration Information System (DCIIS). Funds will procure DODIS-compliant Counterintelligence and Human Intelligence (HUMINT) materiel solutions using migration platforms such as the Migration Defense Intelligence Threat Data System. Funds will be used to procure and support CI/HUMINT Automated tool sets (CHATS). Funds will support 21 large sites (MACOMS), 52 medium sites (installations and Force Projection Brigades), and 253 small sites (detachments in support of EAC and EBC organizations).

DESCRIPTION: Funds the Army's Information Systems Security (INFOSEC) Program (ISSP). Provides communication security, cryptosecurity, transmission security, emission security, computer security, information assurance and equipment and products as a means for protecting telecommunications and information systems which process classified, mission sensitive, national security, and related sensitive information. Prevents exploitation through intercept, unauthorized electronic access, or related technical intelligence threats. Ensures authenticity, integrity, protection and availability of information transmitted by information systems.

JUSTIFICATION: FY 00-01 funds buy:

Network Security, KG-175, and High Assurance Guards to secure Army's portion of the Defense Information Infrastructure. Tactical-Secure Terminal Equipment (T-STE) to provide INFOSEC transparent to the soldier and solutions for TOP SECRET/Special Intelligence subscribers to echelons above and below corps communication systems to resolve problems of secure interface of strategic, tactical, and commercial communication systems as identified by the Joint Staff (J6) in the Multiservice Communications Electronics Board (MCEB) in August 1993/March 1996. AIRTERM KY-100 to protect tactical communications for airborne high frequency radios. KIV-7HS to secure systems used for intelligence gathering and video teleconferencing. KG-194 to secure information and communication trunks. Key Management Infrastructure and Public Key Infrastructure for managing Army's automated Electronic Key, Communication Security (COMSEC) and INFOSEC material. Secure digitized systems for combat units. New equipment training, first destination transportation, and consumable parts for total package fieldings.

DESCRIPTION: This program supports the Department of Defense initiative to modernize and integrate digital operations within the Pacific and European Theaters. The architecture of the Defense Information Systems Network (DISN) will be reconfigured to accommodate the rapidly changing deployment and realignment of forces within the Pacific and European Theaters. This program is a component of the Army's seamless Enterprise Network that provides compatibility across operational systems. The modernization program supports force projection through technology insertion and evolutionary changes. The program utilizes emerging technological developments to capitalize on digital information systems throughout the worldwide DISN. The theater Commanders-in-Chief require a robust infrastructure that will facilitate mobilization and sustainment of a deployed force.

The US Forces, Korea (USFK) requirements have been approved in the Extended Korea Improvement Program (EKIP) and the Korea Communications Infrastructure Upgrade (KCIU) by the Joint Chiefs of Staff (JCS). The goal of these programs is to strategically improve the ability to successfully defend Korea during periods of stress, increase survivability of C4I systems for the warfighter, increase information systems capacity to meet surge requirements, and improve the ability to reconstitute C4I systems. These programs also support command and control communications networks serving the Commander-in-Chief, US Forces and United Nations Command, Korea, and Commander-in-Chief, US Forces, Japan. The ultimate goal is an integrated, survivable network that provides voice, data, messaging, video, and transmission services to the warfighter through the application of emerging technologies such as Asynchronous Transfer Mode (ATM), SONET and bulk encryption.

DESCRIPTION: This program funds the Army-wide requirements for base support radio systems and Test, Measurement and Diagnostic Equipment (TMDE) for US Army Signal Command (USASC). Base support radios are used by installation military police, fire departments, medical personnel and other emergency response activities to coordinate and support emergency response efforts and for critical communications support during mobilization, deployment and split-based operations. Base support radio systems will permit users to share frequencies, thus conserving scarce radio spectra and also provide secure voice/data transmission and access to local telephone systems from portable hand-held radios. The Federal Communications Commission (FCC) and National Telecommunications Information Administration (NTIA) have drastically reduced the available frequencies throughout CONUS. In Korea, the Ministry of Communications (MOC) will implement Phase 2 changes to operational bandwidth and channel separation criteria for Very High Frequency (VHF) Commercial Land Mobile Radios (CLMR) by FY 04, at which time existing radios will become obsolete because they cannot be modified to add the new frequency. Mission capability of law enforcement, security and other base forces during mobilization, deployment and split-base operations would be greatly constrained without adequate communications capability. This program also supports the replacement of obsolete, non-supportable TMDE and interim mission support for command, control, communications and computers worldwide. The USASC TMDE inventory consists of general purpose and special purpose test equipment. This command's capability is maintained through phased replacement of obsolete, non-supportable TMDE. Additionally, long lead times for acquisition of new TMDE results in this program supporting interim acquisition of special purpose TMDE to satisfy mission requirements. Densities of TMDE supported by this program are determined by Defense Information Systems Agency (DISA) standards and maintenance support plans for information systems.

JUSTIFICATION: FY 01 funds upgrade or replaces base support radio systems that Army MACOMS have identified as critical requirements. Army has increased funding and centralized the program under a program manager to ensure meeting non-negotiable deadlines for replacement systems both within CONUS and overseas. FY 01 funds will also purchase replacement TMDE, which includes spectrum analyzers, transmission test sets, LAN cable test sets, fiber optic cable analyzers, microwave frequency counters, four channel oscilloscopes, and interim support for authorized specialized test equipment. Funds will replenish and rebuild expensive, unique test equipment identified as non-repairable through the standard Army maintenance systems. All procurements are in accordance with the documented five year TMDE plan and are designed to satisfy critical mission requirements and equipment shortages. Acquisitions will enable continuation of the essential 99.9 percent availability rate for all communication systems worldwide.

DESCRIPTION: The Army Defense Information System Network (DISN) Router Program (ADRP) addresses Army requirements for DISN connections. The DISN includes the Unclassified Internet Protocol (IP) Router Network (NIPRNET) and the Secret IP Router Network (SIPRNET) and the Defense Asynchronous Transfer Mode System (DATMS). The ADRP includes the acquisition of routers for direct connections, access servers and modems for dial-in connections, ATM switches for direct ATM connections, and associated networking and management devices necessary to connect Army host computers, servers, Local Area Networks (LANs) and Campus Area Networks (CANs) to the DISN. Program acquisition also includes testing, installation, Installation Bill of Material (IBOM), and training. ADRP maintenance provides continuing hardware and software maintenance for all ADRP equipment world-wide. The ADRP equipment is also upgradable to future Army, DoD and industry standards. Reducing the number of connections required to support Army DISN requirements avoids multiple connection charges with each associated DISN connection. The ADRP is an integral part of the Installation, Information, Infrastructure Modernization Program (I3MP) initiative. The objective of I3MP is to provide the required bandwidth for the total information requirements of each Army site now and into the future.

JUSTIFICATION: FY 01 funds will provide routers, access servers, and ATM switches and port expansions and upgrades to existing routers, access servers, and ATM switches to meet additional connections and program requirements. It will also continue to field the cache engine tool to decrease the demand for the bandwidth on the DISN circuit. The continued maintenance of the ADRP equipment will ensure the availability of the network for all Army users.

<p>DESCRIPTION: The Electromagnetic Compatibility Program (EMCP) ensures readiness and effectiveness of command, control and communications systems throughout the testing of tactical and strategic systems for electromagnetic compatibility (EMC) with other civil or defense communications electronics (C-E) systems operating within their environment. This includes the need to conduct EMC surveys at proposed and existing C-E sites intended for upgrade or planning for all frequency resources. This is done to avoid expensive reworking or retrofitting. Propagation engineering is required in designing new networks and C-E equipment. Unique computer models are developed, upgraded and maintained for calculating EMC, propagation predictions, and engineering analyses. These models perform systems analyses for: (1) line of sight, (2) high frequency skywave and groundwave; (3) meteor burst; (4) tropospheric scatter communications systems; (5) antenna performance; (6) spectrum management.</p> <p>JUSTIFICATION: The EMCP requires the procurement of the following replacement and enhancement equipment to sustain the program.</p> <p>A. EMC MEASUREMENT EQUIPMENT: Used to conduct EMC surveys to characterize the EM environment. Surveys are used to measure spectrum occupancy, detect interference and eliminate EM hazards.</p> <p>B. SPECTRUM ANALYZERS: Display and record the frequency domain and transmission characteristics of the radio frequency signals acquired.</p> <p>C. DIRECTOR OF INFORMATION MANAGEMENT (DOIM) ARMY INTERFERENCE RESOLUTION PROGRAM (AIRP) UPGRADE: These systems include hand-held direction finding equipment and computers to run frequency management software and other EM interference (EMI) software to be supplied to Army DOIMs worldwide to resolve radio frequency interference (RFI) problems. These systems will reduce the use of limited resources by correcting RFI problems at the DOIM level.</p>

<p>DESCRIPTION: The World Wide Technical Control Improvement Program (WWTCIP) is a continuing program to initiate, improve, expand and automate Army Defense Information Systems Network (DISN) Technical Control Facilities (TCFs) and Patch and Test Facilities (PTFs) to enable technical control personnel to gain full use of communications resources to support the Warfighters and gain Information Dominance. The program provides direct current power, timing and synchronization equipment, line conditioning equipment, automatic technical control, VF tactical interface, Defense Communications Tri-Tac interface and appropriate test equipment with associated hardware. The program benefits all users of the DISN worldwide including tactical users who connect to the DISN for long haul communications requirements. The upgrades provide the end user faster response time, high quality voice and digital circuits, and minimize outages. Many of the present configurations and equipment can no longer support the Warfighters requirements of voice, digital data, and VTC requirements as well as emerging Asynchronous Transfer Mode (ATM) technology and Giga-Bit Ethernet. The program is essential to support ever-increasing high speed digital requirements of the tactical and strategic users with minimal personnel requirements. The program currently supports DISN Europe, Extended Korean Improvement Program (EKIP), Japan Reconfiguration and Digitization, and Defense Satellite Communications equipment.</p> <p>JUSTIFICATION: FY01 funds will be used to continue to improve, expand, automate and integrate Technical Control Facilities (TCF) and Patch and Test Facilities (PTF) in Europe, Okinawa Japan and CONUS. This will include upgrading timing and synchronization.</p>

DESCRIPTION: This program consolidates funding for improvement/modernization of Information Systems worldwide. It encompasses nontactical telecommunications services in support of Army base operations and Information Systems for Command and Control (C2) requirements. Also, it funds acquisition of common user information systems in support of Military Construction, Army (MCA) projects and Distributed Training Technology (DTT) which provides classrooms not currently addressed in The Army Distance Learning Plan (TADLP).

JUSTIFICATION: The Information Systems (CONUS/Western Hemisphere) program finances upgrades to the Army's telecommunication infrastructure. It includes the MACOM telephone Modernization Program (MTMP), an integral part of the Installation Information Infrastructure Modernization Program (I3MP) initiative which supports the communications requirements of deployed forces and their access to home installation sustaining base systems. The MTMP supports replacement of aging electromechanical switches with electronic digital switches to implement the Integrated Services Digital Network (ISDN) concept and insures compatibility with public networks. The Information Systems - MCA Support program finances acquisition of information systems equipment and switch expansion equipment to be installed in conjunction with military construction projects worldwide, which are not included in the MCA funding. The Information Systems - EUCOM program finances the procurement of hardware and software to replace aging communications equipment in an effort to streamline operations and maintenance costs, improve productivity and customer service, and reduce circuit costs in Europe under the Defense Information System Network-Europe (DISN-E) Program. The Information Systems - PACOM program continues the transition to the ISDN for the Pacific Theater, which will provide intra-base information transfer capability and common data transmission in the place of costly individual stovepipe and non-standard networks. The Distributed Training Technology program allows continued fielding of classroom facilities and infrastructure in order to provide Distance Learning capabilities to additional locations consistent with the Army plan.

DESCRIPTION: This program includes efforts in support of the MACOM Telephone Modernization Program (MTMP) and the European Telephone Switch (ETS) upgrades. MTMP is part of PM Digital Switch Systems Modernization Program (DSSMP) and is an integral part of the Installation Information Infrastructure Modernization Program (I3MP). The overall objective of I3MP is to: (1) support communication requirements of deployed forces and their access to home installation sustaining base systems; and (2) to replace Information Systems in a coordinated, synchronized, integrated manner, thereby optimizing funding/personnel resources and maximizing the operational benefits. I3MP identifies the cooperative role and responsibility for installations in the active, direct execution of the National Military Strategy to project forces beyond the borders of the United States to anywhere in the world with little advance notice. Upgrading telecommunications equipment ensures the most effective interface with existing public telecommunications networks and optimizes the development of evolving Department of the Army programs.

JUSTIFICATION: FY01 will provide upgrades for large switched systems, which were delayed due to the Y2K redirection of funds. These upgrades will include line capacity expansions to allow the switches to function efficiently and provide state-of-the-art service for the warfighter at these I3MP sites.

Wpn Sys Proc U/C													
<p>DESCRIPTION: Videoteleconferencing hubs are needed to provide video interconnection and conference capability between HQ, USAREUR, its major subordinate commands, and its widely dispersed Area Support Groups.</p> <p>JUSTIFICATION: Directly linking multiple subscribers simultaneously over individual leased circuits for videoteleconferencing is very expensive. Developing and fielding videoteleconferencing hubs that are geographically dispersed based on subscriber density will significantly reduce leased circuit costs for videoteleconferencing. The desired hubs will provide a much needed classified and unclassified videoteleconferencing capability interconnecting HQ, USAREUR with its widely dispersed major subordinate commands and Area Support Groups. FY01 funds will procure a hub for the Grafenwoehr, GE area.</p> <p>DESCRIPTION: The Defense Information System Network (DISN-E) Telephone Switch Modernization Program is currently replacing the ETS network in support of USCINCEUR and USAREUR switching requirements, as documented in CINCEUR letter dated 9 Oct 97 and USAREUR letter dated 20 Oct 97, DISN-E replaces existing Army Siemens KNS-4100 switches with state-of-the-art switches.</p> <p>JUSTIFICATION: The FY01 funds will provide software and hardware improvements. EUCOM has developed an installation sequence list for the DISN-E switch replacement program. The number of switches upgraded will depend on the type of switch (large or small multifunction, end office or remote switching unit) and on the price negotiated with the DSSMP contractor.</p>

DESCRIPTION: Information Systems (PACOM) encompasses non-tactical telecommunications requirements to support Army base operations and U.S. Military Command and Control (C2) requirements in the Pacific theater, including upgrade of fixed plant telephone systems in Korea. The upgrades of the Korea Telephone Network (KTN) will modernize the Army telephone systems and provide capacity to meet requirements that cannot be presently satisfied.

JUSTIFICATION: The FY 01 funds will procure essential hardware upgrades to expand line capacity for the designated Korean telephone switches in order to meet increased US warfighter demand for service. The upgrades will provide Integrated Services Digital Network (ISDN) capability for indicated KTN switches to accommodate video teleconferencing and the fielding of Secure Telephone Equipment (STE). Additionally, the upgraded switches will operate more efficiently and permit reduced reliance on leased circuitry. The FY01 funds will provision additional ISDN line cabinets at Yongsan Main, Camp Red Cloud, Camp Carroll, and Camp Humphreys.

DESCRIPTION: The program provides state-of-the-art major information system equipment such as integrated voice/data switches; Tier II computers (i.e., common user, multiple-purpose assets supporting Army installations and/or organizations); voice/data switch expansions; common user LAN transport equipment; and basic telephone instruments. This equipment is to be installed in conjunction with Military Construction, Army (MCA) projects.

JUSTIFICATION: FY 01 funds will support information systems requirements associated with approved MCA projects. Funding is applied to specific projects based upon mission priority, timing of construction schedules, beneficial occupancy dates (BOD), and minimum lead time required for acquisition and installation of associated information system equipment. Funding supports regulatory requirements as outlined in AR 415-15 and other applicable U.S. Army Directives. These funds are essential to ensure that information systems are installed in sync with Corps of Engineer construction schedules. FY01 funds will support IS requirements for telephone switches at Fort Irwin in support of a Command and Control MCA project. The remaining funds will provide IS support to an additional seventy-one (71) approved MCA projects.

<p>DESCRIPTION: The Defense Message System (DMS) provides Y2K compliant regional, installation level and user interfaces to DOD record communications services Armywide. In Dec 1999, the program emphasis will transition from Sustaining Base to Tactical. The AUTODIN Mail Server (AMS) Desktop Interface to Automatic Digital Network (AUTODIN) Host (DINAH), Automated Special Security Information System Terminal (ASSIST) and other AUTODIN terminals are DMS Phase I actions. Phase I is completed. Phase II focuses on the full scale implementation of Consultative Committee on International Telegraphy and Telephony (CCITT) standardized X.400/X.500 messaging products and the phase down of the AUTODIN system. Implementation of DMS replaces AUTODIN. DMS will be the Army's primary messaging system. The new message system will feature: (1) A user operated service concept, (2) A single form of message service using a simplified message format, (3) Multilevel secure processing and (4) Automated local distribution via information transfer networks.</p> <p>JUSTIFICATION: FY01 funds will continue to procure the Tactical Messaging System (TMS) and DMS compliant components off the Air Force sponsored DMS Government Open System Interconnection Profile (GOSIP) contract. Once procured and fielded, these components, which consist of the User Agent (UA) e-mail software package and Subordinate Mail Transfer Agent (SMTA) software/hardware (SW/HW), will extend DMS to the battlefield in support of the Warfighter.</p> <p>FY01-05 funding profile reflects the Information Technology transfer among the OMA/RDTE/OPA appropriations.</p>

<p>DESCRIPTION: The Common User Installation Transport Networks (CUITN), fielded under this program, are part of the Installation Information Infrastructure Modernization Program (I3MP) designed to improve data communications transfer capabilities at Army installations. This program provides state-of-the-art, high-speed, secure common-user, data backbone networks and includes the hardware, software and interfaces to both site internal and external systems, networks, terminals, and turnkey approach to the implementation of these networks. The backbone network provides the capability for connections to site workstations, data processing installations, mainframes, and networks while providing access to gateways on the site and the Defense Information Systems Network (DISN) Wide Area Network (WAN) external to the site. The installation backbone CUITN program will ensure a smooth transition to the Army's long-term objective architecture.</p> <p>JUSTIFICATION: FY01 funds will engineer, furnish and install installation backbone local area networks at three (3) sites at the Minimum Essential Requirements (MER) level on the Installation Sequence List (ISL), and continue/complete implementation at various sites. LAN installations are critical to support the ever increasing data transfer requirements attributable to actions supporting key Army wartime doctrines and the drawdown of Conventional Forces, Europe. The Army is currently using outdated systems, obsolete, overstressed telephone resources, and expensive, non-standard measures to satisfy the increasing data communications requirements. High speed, backbone LANs will be installed to modernize site data transport capability, improve connectivity, standardize transport networks, and increase capacity for key Army systems such as Defense Message System (DMS), Installation Support Module (ISM), Joint Computer-Aided Acquisition and Logistics System (JCALS), Combined Health Care System (CHCS), Global Combat Support System Army (GCSSA) and Distance Learning.</p> <p>DESCRIPTION: The Outside Cable Rehabilitation (OSCAR) program augments and supports rehabilitation and expansion of information transfer systems to meet the requirements of voice, data and the single line concept. By providing the basic installation transmission connectivity from the user to the dial central office/main communications node, it supports the voice and data requirements of warfighting commanders engaged in contingency deployments and split-base operations.</p> <p>JUSTIFICATION: FY01 funds will engineer, furnish and install manhole, duct and cable systems to MER of I3MP. Sites will be installed in accordance with the Army Installation Sequence List (ISL). Systems will replace and/or supplement outdated, degraded, undersized manhole duct and cable systems currently installed at Army installations.</p>

DESCRIPTION: The Pentagon Renovation Project is an on-going construction project directed by Office of the Secretary of Defense and implemented by a Resident Program Manager, Corps of Engineers (COE), and a Project Manager for Information Management & Telecommunications (PM, IM&T), U.S. Army Materiel Command (USAMC). PM, IM&T is responsible for relocating existing IM&T facilities while sustaining operations and implementing a new Pentagon IM&T physical and electronic infrastructure in concert with COE construction. Relocation includes moving the National Military Command Center (NMCC)/Service Operation centers, consolidating seven Telecommunications Control facilities, co-locating 11 Automated Data Processing (ADP) facilities to two facilities, and consolidating 15 command and control, tactical, and administrative telephone switches to 8. The IM&T infrastructure includes the installation of an unclassified/classified backbone and a Network and Systems Management Center. The implementation of IM&T requirements is integral to each phase of the Pentagon Renovation construction program due to the synchronization of both programs. The Pentagon Renovation IM&T Project will provide modern integrated information and telecommunication capabilities to all levels of command in the Pentagon including OSD, the Joint Staff, the Army, Navy, Marine Corp, Air Force and Defense Agencies.

JUSTIFICATION: The Deputy Secretary of Defense has directed the continuation of the Pentagon Renovation Program by starting Wedge construction in FY98. The largest portion of the FY01 program will be the purchase and installation of telecommunications infrastructure equipment in the Wedge 2 above ground area of the Pentagon as the Corps of Engineer's construction progresses through that area. Also planned for FY01 is the continuance of backbone infrastructure equipment purchases, such as data switches, routers, media and cable, and installation as Basement areas are renovated by the Corps of Engineers. FY01 funds will continue procurement of hardware, such as servers and workstations, and management software to build out the Network and Systems Management Center, which manages the Unclassified and Classified Backbones for the Pentagon. Portions of the FY01 program will purchase equipment and cutover circuits in the Consolidated Technical Control Facility in the renovated area of the basement and continue cutover of circuits for renovated area tenants to the Black and Red Command and Control Switches and the Optical Remote Module Administrative Switch.

(U) DESCRIPTION: The All Source Analysis System (ASAS) provides US Army commanders at echelons above corps through battalion a standard all source intelligence processing/reporting system and provides the means for gaining a timely and comprehensive understanding of Opposing Force (OPFOR) deployments, capabilities, and potential courses of action. The system interfaces with selected national, joint, and theater intelligence assets, adjacent/higher/lower military intelligence processors and sensors, Army Battle Command System (ABCS), and organic deployed Intelligence/Electronic Warfare (IEW) teams and assets. The ASAS product set currently includes: ASAS Remote Workstation (RWS), ASAS-Light, Analysis and Control Team (ACT), Analysis and Control Element (ACE), Trusted Workstation (TWS), Tactical Imagery Products Server (TIPS) and the Communications Control Set (CCS). The ASAS system uses standard joint and Army protocols and message formats to interface with forward deployed sensor/teams, intelligence processors and joint/national/Army C3I systems. At the National Training Center, the Brigade Commander said, "Everything I needed to know about the enemy was in the ASAS RWS." ASAS RWS v.4 successfully completed operational testing. RWS v.4 has also proven its utility jointly aboard the Maritime Battle Lab (USS Coronado), at the Joint C4ISR Battle Center, and in support of Marine Corps Exercises and the Extended Littoral Battlespace ACTD. RWS v.4 achieved a successful Milestone III decision for Type Classification-Standard, and Full Rate Production, Fielding, Deployment and Operational Support, Army-wide. IAW USD (A&T) memo dated 10 Dec 98, ASAS was realigned to better represent current efforts and synchronize requirements and schedules with the First Digitized Division. Funding and quantities prior to FY97 are considered sunk, and are no longer addressed in the P-Forms.

U) JUSTIFICATION: FY01 funding supports continued ASAS product procurement and fielding. For example, at the end of FY01, the RWS will be fielded to 28% of Force Package 1 (FP1) units, and 16% of Force Package 2 (FP2) units; ASAS Light will be delivered to 17% FP1 and 16% FP2; and Analysis and Control Team (ACT) will be fielded to 36% of FP1 and 28% of FP2.

The Joint Tactical Terminal (JTT) are a family of special application UHF Line of Sight (LOS)/Satellite Communications (SATCOM) Secure Intelligence dissemination reporting systems for deployment with tactical units. The system uses airborne and satellite relay platforms to provide robust, reliable jam resistant targeting and intelligence data and voice connectivity throughout the battlefield. Data from various sensors and HUMINT sources are transmitted over the Integrated Broadcast Service (IBS). Specific IBS transmission networks include the Tactical/Reconnaissance Exchange System (TRIXS) network, the Tactical Information Broadcast Service (TIBS), the Tactical Receive equipment and related Applications Data Dissemination System (TDDS) and Tactical Data Information eXchange System (TADIXS) networks. The IBS is the worldwide DOD standard Network for transmitting tactical and strategic intelligence and battle management data. The JTT is the next generation DOD standard system which provides additional channels. The JTT terminals deliver critical, time sensitive battlefield intelligence and targeting information at collateral and system high security levels in near real time (NRT) to the worldwide tactical commanders and intelligence nodes at all echelons. The terminals provide direct, secure and dedicated connectivity/interoperability for rapid targeting, threat avoidance, battle management, mission planning and sensor cueing. The equipment can be mounted in fixed and rotary wing aircraft as well as fixed or mobile ground platforms. The JTT facilitates reaction inside the enemy decision cycle and is necessary to winning the information war on the battlefield. The reduced size JTT Briefcase (B) effort was awarded in FY 99 to satisfy the US Army Special Operations Command JTT requirements for a Manpack variant that will weigh 35 lbs or less. This is in compliance with the JTT ORD objective requirement.

JUSTIFICATION: FY01 quantities include receive only and full duplex (receive/transmit) variants based on user identified requirements. JTT is a part of the Army's high priority initiative to digitize the battlefield across four Battlefield Operating Systems (Intel, Aviation, Fire Support and Air Defense). The increase to JTT procurement quantities will close the gap for demand by host system platforms in FY01.

DESCRIPTION:
This product line provides for the procurement of Prophet Ground hardware. This will be the Division and Armored Cavalry Regiment Commanders principal SIGINT and Electronic Warfare (EW) System. It will be designed to support Army XXI and beyond. Prophet will provide the Tactical Commander with an enhanced capability for situational awareness, electronic Intelligence Preparation of the Battlefield (IPB), battlespace visualization, target development, and force protection throughout the division's width and depths as defined in Army XXI. The Prophet system will interface with the division and armored cavalry Analysis Control Element's (ACE) All Source Analysis System (ASAS) as well as the maneuver brigade Analysis Control Team's (ACT) Common Ground Station (CGS) and/or ASAS-Remote Work Stations (ASAS-RWS) providing near-real-time (NRT) digital inputs to the common operating picture (COP). Tactical Commanders will receive added force protection through Prophet's capability of providing reports of intercepted voice communications to the supported units from the Prophet Ground assets. The Prophet System is needed to counter the communications technology revolution and the current worldwide threat; to support the current Army mission, doctrine, priorities and requirements.

As the Teammate, Traffic Jam and Trailblazer systems begin to defield in FY01, they will subsequently be replaced by Prophet Ground. This is necessary due to escalating Operation and Sustainment (O&S) costs and reliability concerns. Prophet Ground will include Electronic Attack (EA) and Low Probability of Intercept (LPI) capabilities. The Prophet Ground System is an integral part of the Army transformation Strategy. Prophet Ground is required to detect, locate and identify critical enemy nodes (emitters), by EW or divisional assets.

The \$12M in FY99 is being transferred to the USMC to support the GBCS/MEWWS program.

JUSTIFICATION: FY01 Funds are required for production/fielding of 19 Prophet Ground Block I/II systems. These systems will replace the Teammate, Traffic Jam and Trailblazer systems that will begin defielding in FY01.

DESCRIPTION: The Tactical Unmanned Aerial Vehicle (TUAV) provides the Army brigade commander with dedicated Reconnaissance, Surveillance and Target Acquisition (RSTA) and Combat Assessment (CA). The TUAV air vehicle will meet a minimum requirement range of 50 kilometers and remain on station for up to four hours. The baseline payload is EO/IR. Procurement of systems including attrition air vehicles will commence in FY 2001. The TUAV system consists of multiple air vehicles, Highly Mobile Multi-Wheeled Vehicles (HMMWV) with shelters, trailers, 2 ground control stations, 2 ground data terminals and a Mobile Maintenance Facility capable of supporting up to three systems. Flyaway and Weapon System procurement unit costs do not include attrition air vehicles.

JUSTIFICATION: The FY01 funds will procure TUAV systems for initial fielding and the training base. In accordance with the Army Transformation Strategy and the Army System Acquisition Review Council (ASARC) decision to accelerate fielding of the TUAV, the FY 2001 funds will be used to procure initial production systems for a ramp-up following a successful OPTEMPO test.

NOTE: \$7.0M has been executed in this program as received from FY:99 Kosovo Supplemental funding. Currently, funds are being reflected in Budget Activity 1, DA0071, but will be displayed in this program for FY99 in the next President's Budget submission.

DESCRIPTION: The Joint Surveillance Target Attack Radar System (Joint STARS) is a surveillance battle management and targeting system. It is a Joint Army and Air Force program with the Air Force as the executive service. The Joint STARS Radar is an airborne multimodal radar system incorporating an electronically scanned antenna and combines both Moving and Fixed Target Indicator (MTI/FTI) and Synthetic Aperture Radar (SAR) functions. The radar is carried aboard a modified Joint STARS E-8 aircraft and broadcasts radar data to the Army Common Ground Station (CGS). In addition to Joint STARS data, the CGS will receive and process Unmanned Aerial Vehicle (UAV) and Commanders Tactical Terminal (CTT) data. Further improvements to the CGS will provide UHF SATCOM connectivity to the E-8 Joint STARS aircraft, receipt of Predator UAV video, direct links for receipt of Airborne Reconnaissance Low (ARL) and U2 MTI radar data. The CGS is a tactical data processing and evaluation center that links into the Army's Battle Command System (ABCS). The CGS will assist commanders in determining battle management and targeting. The CGS integrates signal, imagery and other intelligence processing into a single ground station, resulting in enhanced battle management capabilities. The Joint Service Work Station (JSWS) is a variant of the CGS and will use the hardware and software design, analyses and logistics data from the CGS as the basis for its configuration. The Joint STARS will fulfill an urgent air-land battlefield deficiency by providing an Army/Air Force battlefield sensor and attack control capability designed to detect, locate, track, classify and assist in attacking both moving and stationary ground targets beyond the Forward Line of Troops (FLOT).

The Joint STARS CGS is an integral component to the Brigade Combat Teams under the Army's transformation strategy. The Joint STARS CGS has repeatedly provided high value targeting and intelligence data to Field Commanders during contingencies (Operation Joint Endeavor), as well as during standard mission operations of fielded units. Joint STARS is a proven force multiplier, fielded to high priority units for worldwide deployment.

JUSTIFICATION: The FY-01 funds will procure 12 CGS units to be fielded across all echelons. This funding provides for continuing implementation of the approved P3I program and incorporation of approved modifications into existing systems.

DESCRIPTION: The Integrated Broadcast Service (IBS) is the worldwide DOD standard network for transmitting tactical and strategic intelligence as well as battle management data. Starting in FY99, all DOD systems requiring access to the IBS will gain this access via a new family of common IBS modules (CIBS-M) and Joint Tactical Terminals (JTT). The initial CIBS modules went into production in FY99 and will ultimately upgrade all IBS migration tactical terminals currently in use by the services. Prior to the initiation of the CIBS-M program, the services received the IBS Broadcast via the Commander's Tactical Terminal (CTT), Multi-Missioned Advanced Tactical Terminal (MATT) and Tactical Receive Equipment (TRE). It was anticipated that the CTTs would require modifications to maintain accessibility and interoperability with the IBS Broadcasts. This was to be done via CIBS-M. Based on a detailed migration plan for the CTT Hybrid/Receive (H/R) and CTT 3, and the slip in IBS initial Operating Capability to FY02, it has been determined that it is more cost effective from a life cycle perspective to replace existing CTT Hybrid Receive (H/R) and CTT 3 with baseline JTT. FY99 Mod in Service funding will be used to support a modification to the baseline JTT. This modification, a reduced size JTT, is needed to support special operations forces requirements (i.e. man portable, briefcase) which the baseline JTT cannot satisfy due to size/weight constraints.

JUSTIFICATION: No funding required in FY 00/01.

MODIFICATION TITLE: REDUCED SIZE JTT (NON-RECURRING & RECURRING 1-98-XXX1																																																																																
MODELS OF SYSTEMS AFFECTED:																																																																																
DESCRIPTION / JUSTIFICATION:																																																																																
JUSTIFICATION: The JTT Joint Operational Requirements Document (JORD) defined requirements for a reduced size JTT Briefcase version to satisfy man-pack, man-portable and palletized JTT requirements. Current support for this reduced size JTT is very high from Army Special Operations Command, and U S Special Operations Command (SOCOM). The effort funded via this program will accelerate fielding of a critical capability to truly disadvantaged tactical users (i.e. airborne platforms and special operations forces). Installation costs will not be required in FY 99 as Host platforms will be responsible for costs. Host platforms are MI groups, CGS, DWS, GRCS, ETRAC, ACS, ASAS, Patriot, THAAD, SHORAD, MEADS, JLENS and MLRS.

DESCRIPTION:

The current terrain analysis, topographic and reproduction support provided by Army Engineer Terrain Teams are slow, labor intensive processes that do not meet the needs of the Force XXI digitized battlefield on which the commander must have the ability to rapidly obtain terrain information and topographic products such as cross-country movement, concealment, supply routes, avenues of approach, and line of sight. The DTSS will provide digital maps and updates to commanders and weapons platforms in support of mission planning (e.g., imagery exploitation, cover and concealment, other IPB), rehearsal (e.g., 3D fly-throughs, simulations) and execution (e.g., Common Tactical Picture). The DTSS automates terrain analysis and visualization, data base development/update/management/distribution and graphics reproduction. The Combat Terrain Information Systems (CTIS) Modernization Plan emphasizes the development of a combined, integrated, tactically deployable, fully autonomous terrain analysis and graphics reproduction capability. These capabilities are being provided in 5-ton (DTSS-Heavy (H)) and HMMWV (DTSS-Light (L)) configurations. Fielding of the DTSS-H was completed in Dec 99. The DTSS-H systems will eventually be replaced with DTSS-Ls as part of a HQDA approved upgrade program. The DTSS-L is highly mobile and capable of supporting a full range of military operations, as well as peacetime stability and support operations. The DTSS-Deployable (D) provides a Commercial Off the Shelf (COTS) configuration that is capable of operating the terrain analysis software. The DTSS-D consists of transportable workstations and peripherals that can be set up to augment the tactical configurations. The DTSS-D does not include tactically deployable shelters and vehicles or tactical communications. The DTSS-Base (B) is designed to augment National Imagery Mapping Agency (NIMA) capabilities at the EAC level by providing quick response, special purpose mapping, terrain analysis and data base generation. The DTSS-B includes a Top Secret - SCI component that is capable of handling national technical means information in a secure environment. CTIS systems operate within the Army Battle Command System architecture and are deployed from Brigade through EAC. CTIS systems are vital players in Army Digitization and in the quest for Information Dominance.

JUSTIFICATION: FY01 funding will be used for procurement of the DTSS-L, DTSS-D and DTSS-B. Procurement of the DTSS-L supports HQDA approved Army Order of Precedence fielding requirements. DTSS-D and DTSS-B procurements are in accordance with a HQDA approved upgrade plan for modernization of Commercial Off-the-Shelf (COTS) and Non-developmental Item (NDI) components. Based upon lessons learned from the Division XXI Army Warfighter Experiment, HQ TRADOC has approved an ORD requirement to field the DTSS-L to Brigade level. The FY00-01 OPA funding profile has been increased to reflect the Brigade requirement. CTIS systems will be fielded to Army Engineer Terrain Teams in CONUS (FORSCOM), USAEUR, Hawaii, and Korea (PACOM).

<p>Description: The Tactical Exploitation of National Capabilities (TENCAP) Program provides tactical commanders with rapid access to critical information collected by National Intelligence Sources. To date, the program has been responsible for provisioning the ANTSQ 134(V) (Advanced Electronic Processing and Dissemination System (AEPDS)), the Forward Area Support Terminal (FAST), the Mobile Integrated Tactical Terminal (MITT) and the emerging Tactical Exploitation System (TES) to Army Echelons Above Corps, Corps and maneuver divisions. All systems are characterized as stand alone systems, with multiple communications capability defined in UHF S-Band and terrestrial communications packages, and with the exception of FAST, systems are contained in shelters or vans, with a dedicated primemover and system operators. The TENCAP Program also manages the Enhanced Tactical Radar Correlator (ETRAC) and the Modernized Imagery Exploitation System (MIES). Further information may be found at the Tactical Intelligence and Related Activities (TIARA) Congressional Budget Justification Book, Volume II and the Army's TENCAP Master Plan.</p> <p>Justification: The FY00/01 funds procure both military and commercial hardware and software (GOTS/COTS) capabilities to enhance TENCAP systems' performance and to maintain interoperability with National systems and Army tactical communications architecture. The Units procured under this line are components that are incorporated into all TENCAP systems (including ETRAC and MIES) and fall under the TENCAP Common Baseline Project, which addresses common subsystems, planned improvements, key activities and ongoing/planned initiatives determined to have potential application to multiple TENCAP systems. The FY00/01 funds procure both military and commercial hardware and software (GOTS/COTS) capabilities necessary to field the TES which brings all of the existing and emerging Army TENCAP capabilities into an integrated common baseline; downsized, modular and scalable to meet a wide range of contingency requirements as well as incorporates the standards and protocols dictated by the Common Imagery Ground/Surface System (CIG/SS) program.</p>

<p>Description: The Common Imagery Ground/Surface System (CIGSS) is a Department of Defense (DoD) project aggregating all imagery ground/surface systems into a single project. The CIGSS objective is to enable all systems to receive, process, exploit, and report any imagery source regardless of platform or sensor type to meet the intelligence and targeting needs of tactical commanders. The CIGSS project provides the warfighter with an integrated and interoperable airborne reconnaissance imagery processing and exploitation capability that can be tailored for all levels of conflict. CIGSS consolidates the JROC and DARSC approved restructure of the Joint Service Imagery Processing System (JSIPS) program including the JSIPS-Navy, JSIPS-Air Force, JSIPS-Marine Corps, Enhanced Tactical Radar Correlator (ETRAC), Modernized Imagery Exploitation System (MIES), PACAF Interim National Exploitation System (PINES), and Tactical Exploitation Group (TEG) into a single project. Further information may be found at the Joint Military Intelligence Program (JMIP) Congressional Budget Justification Book.</p> <p>Justification: The Army CIGSS components consist of the MIES, ETRAC, and the imagery portion of the Tactical Exploitation System (TES). ETRAC is a stand-alone synthetic radar (SAR) processing and limited exploitation system based on the Common SAR Processor (CSARP). MIES is a COTS/GOTS developed system that receives and exploits national and theater imagery and generates intelligence reports and products. ETRAC and MIES functionality are combined in the Tactical Exploitation System (TES) to be fielded beginning in FY00.</p>

DESCRIPTION: TROJAN is a combined operational and readiness mission system which uses advanced networking technology to provide rapid relay; secure communications to include voice, data, facsimile; and electronic reconnaissance support to U.S. forces throughout the world. TROJAN operations may be easily tailored to fit military intelligence unit training schedules, and surget during specific events to involve every aspect of the tactical intelligence collection, processing analysis and reporting efforts.

Modifications of in service equipment (MODS) provide for materiel change/upgrades to: (1) TRAILBLAZER, AN/TSQ-138, SINGGARS Interference Cancellation upgrade to resolve problems (hardware and software) associated with integration of the Single Channel Ground and Airborne Radio System (SINGGARS). SINGGARS is the new generation of Combat Net Radio (CNR). SINGGARS is replacing the AN/VRC-12 family of single channel radios. The integration of SINGGARS requires other hardware and software changes because of differences from the AN/VRC-12 series radios being replaced. (2) The AN/PRD-13(V)2 provides for an organic system that can intercept, direction find (DF) and provide threat warning and situational awareness information directly to the support unit. The system is modular, very light weight, with minimal power requirements and configurable to support man-pack operations. (3) Y2K fixes for the Guardrail and ARL programs.

JUSTIFICATION: FY01 funds are required to support procurement of the AN/PRD-13 systems.

INDIVIDUAL MODIFICATION												Date	February 2000																																																																																			
MODIFICATION TITLE: SINGARS Interference Cancellation 1-91-07-0003																																																																																																
MODELS OF SYSTEMS AFFECTED: AN/TSQ-138(TRAILBLAZER)																																																																																																
DESCRIPTION / JUSTIFICATION:																																																																																																
<p>This Materiel Change will resolve problems (hardware and software) associated with integration of the Single Channel Ground and Airborne Radio System (SINGARS) into Intelligence Electronic Warfare (IEW) systems. SINGARS is the new generation of Combat Net Radio (CNR). It is replacing the AN/VRG-12 family of single channel radios. SINGARS provides effective Electronic Counter-Countermeasures (ECCM) by randomly hopping to preassigned frequencies. This random hopping causes anomalies in IEW mission equipment which require hardware/software changes. In addition, its integration into IEW systems requires other hardware and software changes because of differences from the AN/VRG-12 series radios being replaced. This modification program is scheduled to be completed in March 2000.</p>

INDIVIDUAL MODIFICATION																																																																																																																																																																																																																																																		
MODIFICATION TITLE: AN/PRD-13(V)2 1-97-07-0001													Date																																																																																																																																																																																																																																					
MODELS OF SYSTEMS AFFECTED: AN/PRD-12 Replacement																																																																																																																																																																																																																																																		
DESCRIPTION / JUSTIFICATION: The AN/PRD-12 is a man-transportable radio direction finding (DF) system fielded to Army units that performs intercept and line of bearing measurements and provides fix calculations when operating in the netted mode. The Army units rarely use the netting capability of the AN/PRD-12 as it is operationally difficult to establish and bears little influence on mission success. A requirement exists for an organic system to provide threat warning and situational awareness information directly to the supported unit. The system must be modular, very light weight, with minimal power requirements and configurable to support man-pack operations. JUSTIFICATION: The AN/PRD-13(V)2 procurement is the replacement for the AN/PRD-12.

DESCRIPTION: The Counter Intelligence/Human Intelligence (CI/HUMINT) Management System (CHIMS) is the tactical CI/HUMINT subsystem of the All Source Analysis System (ASAS). It meets the automation requirements for Army tactical and strategic CI/HUMINT information collection, investigation, interrogation, operations, document exploitation, and force protection. The total CHIMS automation architecture extends from the ASAS Division and Corps Analysis and Control Element (ACE) to the individual agent/collector. The objective architecture will consist of three sub-elements: 1) ASAS CI/HUMINT Single Source (CI/HUMINT SS) workstation software will provide single source analysis and processing capability at the Corps and Division level. Incoming HUMINT and CI information will be processed to produce intelligence and maintain CI/HUMINT intelligence databases and the Common Operational Picture (COP), hardware procurement by PM ASAS; 2) Counter Intelligence Operations/Interrogation Operations (CI/INTG OPS) workstation provides automation and analysis capabilities to Military Intelligence units, and to the CI Staff Officer (CISO) at echelons division and above. It provides a common interface to the Defense Counterintelligence Information System (DCIIS); 3) CI/HUMINT teams require two types of automation support. The first, a Team Leader device, is the AN/PYQ-3 CI/HUMINT Automated Tool Set (CHATS). It interfaces with the ASAS Remote Workstation (RWS), CI/INTG OPS workstation and individual CI/HUMINT agents/collectors device. The second, the Individual Tactical Reporting Tool (ITRT) provides a handheld automated collection device for agent/interrogator operations. It provides automation capability to collect, manage, receive, store and export text, electronic data, and digital imagery information. It is also capable of preparing, processing and disseminating standard messages. In future budget submissions this item will be submitted as a sub-element of All Source Analysis System (ASAS)(SSN-KA4400)

JUSTIFICATION: The remaining one-half of the ITRT requirements will be procured FY01.

<p>DESCRIPTION: This budget line supports automation requirements for the Army Intelligence and Electronic Warfare Master Plan (AIMP). The AIMP uses capabilities from the Force Integration Masterplanner (FIM) to develop decision support aids that facilitate development and display of intelligence force structure, architectures and systems. The FIM is a computer-based system of systems using commercial-off-the-shelf (COTS) software to support PPBES decision making in the Intelligence and Electronic Warfare (IEW) community. The AIMP is a publication mechanism that presents the IEW future vision to Army consumers over Intelink and Intelink-S.</p> <p>JUSTIFICATION: FY01 funds will be used to continue replacing proprietary and obsolete hardware with standard COTS UNIX platforms and software. This provides the potential for interoperability with other UNIX applications, reduces hardware maintenance costs, and provides significantly better processing capability. FY01 funds will also be used to acquire high speed product servers for Intelink & Intelink-S networks making the FIM products available to any Army consumer, world-wide. Hardware and software procured will support Headquarters, Department of the Army, and FIM field support sites at Fort Belvoir, Fort Huachuca, and Fort Monmouth.</p>

DESCRIPTION: The SHORTSTOP Electronic Protection System (SEPS) is a fully integrated Radio Frequency Countermeasure system which is designed to provide protection for personnel and high value assets against proximity fuzes. There are three configurations of SEPS: a manpack system, a stand alone system, and a vehicle mounted system. SEPS will maximize tactical utility and provide protection against indirect fire. SEPS will be used by Infantry, Engineering, Armor, Field Artillery and Intelligence units to enhance survivability.

JUSTIFICATION: In FY99, a total of \$19.942M was provided to procure 86 SEPS to partially fulfill urgent USAREUR/ARCENT requirements. FY00 funding will procure an additional 90 SEPS for USAREUR/ARCENT requirements. The FY99 funding of \$19.942M shown on this form does not agree with the funding shown in the FY01 Pres Bud database. The delta was erroneously placed in the wrong Budget Activity.

DESCRIPTION: Sentinel AN/MPQ-64 consists of a radar-based sensor with its prime mover/power, identification friend or foe (IFF), and Forward Area Air Defense (FAAD) Command, Control, and Intelligence (C2I) interfaces. The sensor is an advanced three dimensional battlefield X-Band air defense phased-array radar with an instrumented range of 40 km. The Sentinel is capable of operating day or night, in adverse weather conditions, in the battlefield environments of dust, smoke, aerosols, and enemy countermeasures. It provides 360 degree azimuth coverage for acquisition tracking. The Sentinel contributes to the digital battlefield by automatically detecting, classifying, identifying, and reporting targets (cruise missiles, unmanned aerial vehicle, rotary wing and fixed wing aircraft). Targets can be hovering to fast moving, as well as from nap of the earth to the maximum engagement altitude of Short Range Air Defense (SHORAD) weapons. Very accurate and quick reacting, Sentinel acquires targets sufficiently forward of the Forward Line of Troops to improve SHORAD weapons reaction time and allow engagement at optimum ranges. The Sentinel integrated IFF reduces the potential for fratricide of Army Aviation and Air Force aircraft. Highly mobile and reliable, the Sentinel Anti-Radiation Missile and Electronic Countermeasures resistant performance supports Army Corps and Divisional Air Defense operations across the full spectrum of conflict.

JUSTIFICATION: FY 01 funds provide production hardware for National Guard unit (2-263 ADA).

<p>DESCRIPTION: Night Vision Devices (KA3500) is a summary budget line. There are four subsidiary lines which are: K36400 Night Vision, AN/PVS-7/14 AID; B53800 AN/PVS-6 Mini Eyesafe Laser Infrared Observation System (MELIOS); K35000 AN/PAQ-4 Infrared Aiming Light (IAL); K31300 AN/VAS-5 DVE (1): The AN/PVS-7 is a lightweight, night vision goggle consisting of a monocular objective lens assembly, one state-of-the-art Third Generation Image Intensifier tube, and two eyepiece lens assemblies integrated into a housing which is affixed to the user's head or helmet. The AN/PVS-14 Monocular night vision device is a variant of the AN/PVS-7 in that it has only a single lens assembly. The AN/PVS-7/14 is used by individual soldiers at night to perform Combat, Combat Support, and Combat Service Support operations. (2) The AN/PVS-6 MELIOS is a hand-held, eyesafe laser rangefinder with an integrated compass and vertical angle measurement capability. (3) The AN/PAQ-4 IAL is a lightweight, weapon mounted and boresighted aiming light. The aiming light output is visible only when used with a night vision goggle, such as the AN/PVS-7. (4) The K31300 AN/VAS-5 DVE is an uncooled thermal imaging system developed for use on combat and tactical wheeled vehicles. Through FY98, this roll line also includes K22900 AN/PAS-13 Thermal Weapon Sight (TWS), K38400 AN/PLQ-8 Target Location and Observation System (TLOS), K38300 Long Range Advanced Scout Surveillance System (LRAS3), and K30800 AN/PVH-1&2 Lightweight Video Reconnaissance System (LVRS).</p> <p>JUSTIFICATION: The "Own the Night" initiative includes the AN/PVS-7/14 and the AN/VAS-5 DVE. The FY 2001 funds will procure AN/PVS-7/14 and AN/VAS-5 systems with the latest technology for fielding to Special Operations Forces (75th Rangers, 82nd Airborne, 101st Air Assault, 10th Mountain, 2nd and 25th Infantry, and Scout Battalions).</p>

DESCRIPTION: K31300, AN/VAS-5 Driver's Vision Enhancer (DVE); The DVE is an uncooled thermal imaging system developed for use on combat and tactical wheeled vehicles. DVE facilitates fast paced "Own The Night" force projection operations by providing enhanced mobility during darkness and in degraded battlefield conditions (smoke, dust, fog).

JUSTIFICATION: The DVE is a component of the Army Transformation Strategy, and will be fielded to the Brigade Combat Teams. The "Own The Night" initiative includes the AN/VAS-5 DVE. Funds in FY 2001 will initiate procurement of DVE systems to be fielded on TOW HMMWV vehicles in the 82nd Airborne Division.

DESCRIPTION: The Long Range Advanced Scout Surveillance System (LRAS3) is a long range reconnaissance and surveillance system operable in both a stationary vehicle mounted configuration and in an autonomous dismounted configuration. The LRAS3 is a line-of-sight multi-sensor suite, which provides a real-time target detection, recognition, and identification capability to the scout 24 hours a day in all weather conditions. LRAS3 also determines far target location (FTL) coordinates for any target ranged to by the operator.

JUSTIFICATION: The Long Range Advanced Scout Surveillance System (LRAS3) program is one of the top priority systems of the US Armor School and Center and HQ TRADOC. Currently, US Army scouts do not have the necessary equipment to perform target acquisition and FTL functions "around the clock" and with sufficient performance capability to enable them to remain outside enemy engagement ranges. LRAS3 will utilize Second Generation FLIR (SGF) thermal sensor, which will enable the scouts to function 24 hours a day in adverse weather and penetrate battlefield obscuration. LRAS3 will significantly increase the survivability of scout forces allowing them to continue their mission as the eyes of the commander in the battlefield. The FY 2001 funds will continue the procurement of LRAS3, with the first systems being fielded to the 1st Cavalry Division, part of the 1st Digitized Corps. The initial procurement contract will be a competitively awarded five year multiyear procurement from FY 2000 to FY 2004.

DESCRIPTION: K30800, AN/PVH-1&2 Lightweight Video Reconnaissance System (LVRS) is a system designed to capture and transmit still video images through military radios. The images are captured with a portable AN/PVH-1 LVRS Out Station which transmits the captured image to the AN/PVH-2 LVRS Base Station for analysis and dissemination. The LVRS is an "Own the Night" initiative that provides the first day/night image transmission capability between ground scouts and their higher headquarters, facilitating rapid target identification and analysis of key structures/terrain and other data critical to mission planning/execution.

JUSTIFICATION: LVRS is a component of the Army Transformation and will be fielded to the Brigade Combat Teams. The FY 2001 funds will procure this LVRS capability for fielding to the United States Army Special Operations Command (USASOC).

DESCRIPTION: K22900, AN/PAS-13 is a multi-purpose Thermal Weapon Sight designed to be mounted on all Infantry Individual and Crew Served Weapons. It is a GEN II Thermal Device which significantly improves dismounted Infantry operation capability by increasing range and enabling both day and night vision through smoke, fog, battlefield obscurants and in extremely low light levels such as under triple canopy jungle.

JUSTIFICATION: The "Own the Night" initiative includes the AN/PAS-13 TWS. The TWS will also be a component of Land Warrior. The FY 2001 funds will procure TWS systems for fielding to the Special Operations Forces (1st, 3rd, 5th and 18th Corps Long Range Surveillance Companies, 1st, 2nd, 3rd, 4th and 25th Infantry, Scout Battalions), 10th Mountain Division, 82nd Airborne, 101st ID, TRADOC and Military Police.

NARRATIVE: The Combat Identification System for the Dismounted Soldier (CIDS) is a lightweight, laser-based, question and answer type system, used by the individual soldiers to positively identify friendly soldiers. The system includes a compact, eyesafe, laser interrogator, a laser detector assembly, an electronic processor unit, and an omni-directional RF responder. The laser transmitter also includes an aiming laser pointer for aiming the soldier's weapon at night when using Night Vision Goggles and provides an embedded training capability that is interoperable with MILES/MILES 2000 training systems. The system will provide combat identification beyond the effective range of the weapon and will exceed the soldier's target acquisition capability under degraded atmospheric conditions. The system will also be interoperable with the combat identification functions to be embedded in the Land Warrior equipment suite. The system will fulfill requirements stated in the Operational Requirements Document (ORD) for use by Army, Marine and Special Operations applications.

JUSTIFICATION: FY-01 funding is required to establish a Low Rate Initial Production (LRIP) ramp up to production. These LRIP units will be fielded to the 101st Airborne.

DESCRIPTION: Artillery Accuracy Equipment involves the procurement of meteorological, survey and velocity measuring equipment designed to improve accuracy of Army artillery weapons and increase the probability of first round target hits. This category of equipment included procurement of the Meteorological Measuring System (K27800) and Artillery Muzzle Velocity System (AD3250).

JUSTIFICATION: The FY01 funds support fielded units and readiness requirements with conventional and Paladin versions of the Muzzle Velocity System (MVS) and the Meteorological Measuring System (MMS), providing field artillery weather data.

DESCRIPTION: This budget line item supports procurement of the Portable Inductive Artillery Fuze Setter (PIAFS). The PIAFS is a hand held wand that can be used to set all NATO inductive artillery fuzes including the M762, M767 and XM 782 Multi Option Fuze for Artillery (MOFA).

JUSTIFICATION: PIAFS is needed to support fielding of the XM782 Multi Option Fuze for Artillery (MOFA). PIAFS will be required in all US howitzer systems except Crusader, which has built-in inductive artillery fuze setting capability. The XM782 MOFA begins production in fiscal year 2000 therefore procurement of the PIAFS is critical to allow the current artillery fleet to make use of this new artillery fuze.

ACQUISITION MANAGER: PM Crusader

DESCRIPTION: MOD IN-SERVICE EQUIPMENT (TAC SURV) funds the modifications to the FIREFINDER radars, the AN/TPQ-36 Mortar Locating Radar and the AN/TPQ-37 Artillery Locating Radar. The FIREFINDER equipment is designed to meet the Army's critical need to quickly and accurately locate the large number and variety of hostile indirect fire weapons. The FIREFINDER radars use a combination of radar techniques and computer controlled signal processing to detect and locate enemy field artillery with sufficient accuracy to permit rapid engagement with counterfire. The FIREFINDER radars are capable of locating multiple weapons simultaneously and transmitting the target data to appropriate counterfire elements in near real time. The AN/TPQ-36 is a phased-array X-Band radar which automatically locates mortar and short range rocket launchers. The system is configured on three (3) HMMWVs making it highly mobile and transportable. The AN/TPQ-37 is a larger system requiring a 5-ton truck to pull the Antenna Transceiver Group (ATG). The AN/TPQ-37 is a phased-array S-Band radar with a longer target acquisition range than the AN/TPQ-36 allowing it to locate long range artillery and rockets.

JUSTIFICATION: FY00-01 funds procurement and continues fielding of AN/TPQ-36(V)8 modification kits. FY00-01 funds the Fire Support Digitization program which procures hardware/software required to upgrade AN/TPQ-37s to allow AFATDS connectivity and provide Joint Technical Architecture-Army (JTA-A) compliance.

INDIVIDUAL MODIFICATION																																																																																																										
MODIFICATION TITLE: AN/TPQ-36(V)8 Electronic Upgrade 1-90-07-0016										Date	February 2000																																																																																															
MODELS OF SYSTEMS AFFECTED: AN/TPQ-36(V)5 and AN/TPQ-36(V)7 HMMWV Radar																																																																																																										
DESCRIPTION / JUSTIFICATION: <p>The AN/TPQ-36 is the primary target acquisition and counterfire system for field artillery in support of Divisions, separate Brigades, and rapid deployment task forces. This program incorporates an electronics upgrade to correct Operation Desert Storm identified deficiencies in range, false target rate, target throughput, target classification and displacement time. It replaces electronic components rapidly approaching obsolescence with Common Hardware/Software (CHS) and/or Commercial Off-The-Shelf (COTS) equipment. An FY99 Congressional plus-up of \$10.0M procured seven (7) modification kits. An FY00 Congressional plus-up of \$11.0M will procure seven (7) additional modification kits. FY00 funds will also complete the installation of the modification kits procured in FY96/97. FY01-05 funding will procure and install an additional thirty-five (35) modification kits.</p>																																																																																																										
DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: <p>Milestone III was approved in 3QFY96. A Full Rate Production contract for eleven (11) modification kits was awarded in 4QFY96. An option for eleven (11) kits was awarded in 2QFY97. Initial Operational Capability (IOC) was accomplished 4QFY98. A contract for seven (7) modification kits was awarded Sep 99. A contract for an additional seven (7) kits will be awarded in 2QFY00.</p>

INDIVIDUAL MODIFICATION																																																																																																																																																																																												
MODIFICATION TITLE: Fire Support Digitization 99-001												Date																																																																																																																																																																																
MODELS OF SYSTEMS AFFECTED: AN/TPQ-37(V)/5/8																																																																																																																																																																																												
DESCRIPTION / JUSTIFICATION:																																																																																																																																																																																												
<p>This upgrade will modify the FIREFINDER Operations Control Group (OCG) and will incorporate hardware and software to allow AFATDS connectivity and provide Joint Technical Architecture-Army (JTA-A) compliance. The new hardware will include a Versatile Computer Unit (VCU) and TACFIRE Control Interface Module (TCIM).</p> <p>FY00 funds procurement of the hardware/software to upgrade the AN/TPQ-37(V)/5/8s and field to the First Digitized Division. FY01 funds the installation of the remaining kits.</p>																																																																																																																																																																																												
<p>DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES:</p> <p>Non-Recurring Engineering (NRE) efforts to develop software and hardware (a new Circuit Card Assembly (CCA)) were accomplished during FY99. A contract will be awarded in 3QFY00 to procure the CCAs. Contracts for the VCUs and TCIMs will be awarded in 2QFY00. IOC will be accomplished with the First Digitized Division (FDD) fielding in 4QFY00.</p>

DESCRIPTION: The mission of PM Force XXI Battle Command Brigade and Below (FBCB2) is to field a digital information system that provides mounted tactical combat, combat support, and combat service support commanders, leaders and soldiers, integrated, on the move, real-time/near real time situational awareness and command and control information. This capability will be fielded from brigade down to the soldier/platform level across all Battlefield Functional Areas (BFAs) and include other division and corp elements necessary to support brigade operations. FBCB2 will be integrated into the mounted and dismounted maneuver (divisional, separate, heavy, medium and light) cavalry/reconnaissance and armored cavalry, mechanized infantry and aviation units. PM FBCB2 is developing and delivering the Applique (computer, software, and installation kits) which is integrated into various platforms. Battlefield digitization allows the Army's primary weapons and battle command systems to see, acquire and engage threats while sharing the same information with equal clarity, using advanced technologies and digital communications. These platforms are connected through a communications infrastructure called the Tactical Internet. Interoperability is provided through the use of graphics, images, common messages and data elements. The FBCB2 system and Tactical Internet provide the power of the network to share situational awareness (SA) and command and control (C2) information toward the efficient use of resources within the enemy's decision cycle. This seamless digitization (computer with graphics display, global positioning system, communications link and command and control software) will be applied across the army. FBCB2 is integrated with the Army Tactical Command and Control System (ATCCS) located within the brigade and battalion. The interfaces between FBCB2 and ATCCS systems will provide users at all levels a common picture of their battlespace.

JUSTIFICATION: The FY-01 program provides for the continuation of the Low Rate Initial Production (LRIP) production buy and fielding to the Second Digitized Division (1CD-Ft Hood). The LRIP permits establishment of a robust production base and an orderly increase in the production rate for the system sufficient to lead to full-rate production upon the successful completion of operational testing. This LRIP buy provides the Army with quantities required to develop the Doctrine, Training, Leadership, Organization, Materiel and Soldiers (DTLOMS).

NOTE: The total Army Acquisition Objective (AAO) number is 59522. This includes the FBCB2 systems and Abrams/Bradley units funded in accordance with the Horizontal Technology Integration (HTI) policy.

<p>DESCRIPTION: K31100, AN/PED-1, Lightweight Laser Designator Rangefinder (LLDR) is a modular system designed for day/night all weather target acquisition, precise location, and designation for engagement by a variety of munitions. The target location module contains an advanced Forward Looking Infrared (FLIR) thermal sensor, day camera, laser rangefinder, digital compass/vertical angle measurement device, Global Positioning System, and system controller with digital data and video outputs. The laser designation module contains the laser and associated optics required for precision engagement by laser-guided artillery and aircraft-launched munitions. Weighing just 35 pounds with tripod and battery, the man-portable LLDR gives the light forces an impressive new fire support capability with 24-hour target identification, digital data export of precise target location for engagement by indirect fires, or laser designation for destruction by laser-guided munitions. LLDR will also be mounted on the STRIKER vehicle to provide this same target location and engagement capability for mounted artillery fire support teams.</p> <p>JUSTIFICATION: LLDR is a component in the Army Transformation Strategy, and will be fielded to the Brigade Combat Teams. The LLDR meets an urgent requirement for precision target location and engagement for the artillery fire support teams, and is to be integrated into the STRIKER system. LLDR is a Priority system for the First Digitized Division, and will give fire support teams the capability to send timely and accurate target location digital data with the push of a button. LLDR will also serve as the sensor and digital data source for Marine Corps fire support teams, with Marine Corps providing funding for a joint production program starting in FY 2001. The Army FY 2001 funds will procure this critical capability for fielding to the 82nd Airborne Division and the 2nd Infantry Division.</p>

DESCRIPTION:
The M30 Mortar Ballistic Computer (MBC) calculates ballistic trajectories and gives the mortar user data to elevate gun, set charge, and direct fire for all mortar rounds. The MBC provides digital message capability and mortar firing computations. The MBC will interface with the Advanced Field Artillery Tactical Data System (AFATDS) to improve required response time and first round accuracy for mortar fire. The hardware in FY1997 and prior was the Common Hardware/Software (CHS) Handheld Terminal Unit(HTU). Future buys may be a commercially available portable computer.

JUSTIFICATION:
The current M23 MBC is not supportable in the field due to components no longer being available/procureable. Also, the current requirements exceed the memory capacity of the M23. It does not support projected mortar ammunition items. The next generation MBC will be capable of accepting software upgrades electronically, thus reducing the time and cost currently required to apply software upgrades via a hardware change to each fielded unit.
The FY1997 and prior buys procured the CHS HTU, which has proved unsatisfactory for light forces use.
The FY2000 program funds qualification of MBC software on an alternative portable computer, provide VMF software upgrade and conduct residual actions from Limited User Test.
The FY2001 program procures 73 computers, which will field to one light infantry division.

DESCRIPTION:
The digital Mortar Fire Control System (MFCS) is a revolutionary improvement in mortar capability, seamlessly linking mortar fires in the future digital battlefield. MFCS allows mortar platoons to maintain TEMPO by providing digitally linked responsive, accurate fire support to maneuver battalions. MFCS dramatically increases survivability with setup times going from 8 minutes to 1 minute, soldiers not having to dismount, semi-autonomous operations and a shoot and scoot capability similar to Paladin. MFCS significantly reduces the probability of fratricide through situational awareness. MFCS maximizes the lethality of the battalion commander's organic 120mm mortars by reducing the circular error probability (CEP) from 230 meters for the current aiming circle to 60 meters. The MFCS is fully compatible with the Advanced Field Artillery Tactical Data System (AFATDS) and links mortars, for the first time, to digital fire support planning and execution by the fire control officer.

JUSTIFICATION:
MFCS is an integral part of Force XXI digitization/modernization.
FY2001 provides for 1 Brigade set.
Type Classification date: Heavy - TCPLP 2Q 01 ; TC Std Jan 02; Light - 4Q03

DESCRIPTION: IMETS is a tactical automated weather data system that receives, processes and disseminates timely weather and environmental effects, forecasts, observations, and automated Tactical Decision Aids (TDAs) in support of the Army Warfighting commanders. This system consists of Army Tactical Command and Control System (ATCCS) common hardware/software (CHS), and communications that will be operated by Air Force weather personnel. IMETS is deployed at Echelons Above Corps (EAC), Corps, Division (DIV), Separate Brigade, Armored Cavalry Regiment (ACR) and Special Operations Forces (SOF). The IMETS requirements have been upgraded to align with the JTA, DII COE, and for ABCS merging concept. This upgrade moves from the single vehicle mounted configuration to a more versatile concept, e.g., Vehicle Mounted, Command Post, and Light (laptop) versions. Each IMETS configuration supports a core set of requirements and is capable of performing the following functions: (1) receive weather data from all available sources: weather satellites; local and remote weather sensors at higher, lower and adjacent echelon IMETS; weather radar; artillery meteorology sections (ARTYMET); theater forecast units (TFUs) and USAF Global Weather Central; (2) process and display weather information, display weather radar data, display weather satellite data and imagery, and generate Tactical Decision Aids; (3) disseminate weather data, forecasts, and Tactical Decision Aids via area communications system, to all users and to other IMETS at higher, lower and adjacent echelons; (4) operate independently using High Frequency receivers, satellites, or communications networks as appropriate; and (5) relocate with the unit to which it is assigned. Projected IMETS procurement and fieldings for all configurations by fiscal years are as follows: 7 Vehicle mounted in FY00; 7 Vehicle-mounted in FY01; 2 Vehicle-mounted in FY02 and 166 Light configurations from 2Q FY02 through 4Q FY04; 9 Command Post in FY03; and 9 Vehicle-mounted in FY05.

JUSTIFICATION: FY01 procures and fields 7 vehicle-mounted systems. The adjustment to the quantities in FY01 move the light configuration out a year to provide vehicle-mounted configurations to critical Army units. The draft Basic of Issue Plan (BOIP) requires 37 vehicle-mounted systems. This changes and aligns the program with DAMO-FDI guidance (26 July 1999 Memorandum of Authorization) and is an efficient use of the in-place fabrication line for the vehicle-mounted system.

DESCRIPTION: The Army Tactical Operations Center (TOC) program provides commanders and staff (all echelons of command from Battalion to Corps) with integrated digitized command and control facilities to exploit the enhanced situational awareness and force multiplier effect gained through digitization. The objective is battlefield dominance using interoperable, robust Army Battle Command System (ABCS) components operating in a Defense Information Infrastructure (DII)/Common Operating Environment (COE) compliant architecture.

JUSTIFICATION: The Army TOC Program will provide digitized TOCs for the First Digitized Division and III Corps. Army TOCs will ensure the objectives of standardization and interoperability across forces by developing and fielding operationally effective and supportable integrated, digitized tactical operational centers that satisfy the functional information requirements of commanders and staffs at all echelons of command. FY 01 funds will be used to procure integration hardware, integration, and fielding for TOCs. Digitized Army TOCs will provide the infrastructure necessary to operate the Army Tactical Command and Control System (ATCCS). Working together these systems will provide, for the first time, a digitized information system that will allow commanders to plan, command, and dynamically control situational awareness. The Army TOC program is critical to the success of Army Digitization Modernization and to provide warfighters with the tools to win the information war.

<p>DESCRIPTION: AFATDS provides the multi-service (Army and Marine Corps) automated Fire Support Command, Control and Communications portion of the Army Battlefield Command System (ABCS). AFATDS enables the maneuver commander to plan and execute attacks utilizing the optimal weapon-target pairing combinations. It provides the maximum utilization of fire support assets available on the expanding battlefield. AFATDS will interoperate with the other ABCS Battlefield Functional Areas, as well as the Navy's and Air Force's current and evolving weapon and control systems. AFATDS provides integrated automated support for planning, coordinating and controlling all fire support assets (field artillery, mortars, close air support, naval gunfire, attack helicopter and offensive electronic warfare) and for executing counterfire, interdiction and suppression of enemy targets for all fire support operations. AFATDS uses nondevelopmental, ruggedized ABCS Common Hardware/ Software, including the Compact Computer Unit (CCU), Notebook Computer Unit (NCU) as well as peripheral devices such as various tactical display devices, printers and installation kits.</p> <p>In 1998, AFATDS was realigned to better represent current efforts and synchronize requirements and synchronize schedules with the First Digitized Division. Funding and quantities from FY97 and prior are considered sunk and are no longer addressed in the P-Forms.</p> <p>JUSTIFICATION: AFATDS will greatly enhance the fire support capability of the battlefield through responsiveness, survivability and continuity of operations. It will provide a complete fire support command and control capability to the maneuver commander. FY01 funds will completely procure 1 Heavy Division, 5 Field Artillery Brigades, and 1 each Armored Cavalry Regiment and Light Infantry Division.</p>

The Fire Support Ada Conversion (FSAC) is composed of two software programs to provide Command and Control at Corps through Platoon.

The Battery Computer System (BCS) is the Command and Control System used for tactical and technical fire control of cannon artillery. It consists of Ada software on a Lightweight Computer System (LCU).

The MLRS Fire Direction System (FDS) provides tactical fire control for the field artillery rockets and missiles at battalion, battery and platoon echelons. The MLRS FDS will operate either as a stand alone FDS using the Tactical Communications Interface Module (TCIM), or as a component part of the Fire Direction Data Manager (FDDM) using the Communications Data Processing Unit (CDPU). As a stand-alone FDS, the MLRS FDS may exist at an MLRS battalion, MLRS battery, or MLRS platoon echelon.

FSAC program funding in the outyears provides for continuing software upgrades (Package 11, 12...), fielding of equipment to evolving units as a result of force structure changes, hardware upgrades to maintain technical capabilities, and maintenance of equipment.

Justification: Funding in FY01 will procure various hardware upgrades to maintain technical capacity to support Package 11 software requirements and software upgrades to support Package 12.

DESCRIPTION: The Combat Service Support Control System is an automated Command, Control and Communications (C3) system that supports the CSS component of the Army Battle Command System (ABCS), and provides a critical logistical C2 capability for the Army's Force XXI. It will automate the current manual processes of force level planning and decision making for commanders and their staffs. CSSCS interoperates both vertically, within the CSS Battlefield Functional Area (BFA), as well as horizontally with other BFA's; namely, Fire Support, Maneuver Control, Intelligence/Electronic Warfare, and Air Defense. CSSCS implements functionally through use of ABCS common hardware and software, Defense Information Infrastructure Common Operating Environment (DII COE), reuse software, and unique application software. The total OPA requirement for CSSCS based on approved 1998 ORD is 3,081 systems, plus 39 systems for the Brigade Force.

JUSTIFICATION: FY01 funds will support the procurement and fielding of the CSSCS in Full Scale Production. Fielding locations include XVIII Airborne Corps units, U.S. Army Europe (USAREUR), Brigade Force and the training base. This automated CSSCS node is required to support the fielding and operation of ABCS by providing a responsive automated CSS operation that is capable of supporting the Commander's requirement to perform timely predictive and situational analyses.

DESCRIPTION: The Forward Area Air Defense Command, Control, and Intelligence (FAAD C2I) System provides critical, automated threat aircraft, cruise missile and UAV Battle Management/Command, Control, Communication, and Intelligence (BM/C4I) information to support the planning and decision process at various levels of command. The mission is to collect, digitally process, and disseminate real time target cueing and tracking information, common tactical air picture, and C2I information to all Short Range Air Defense (SHORAD) weapons [Avenger, Linebacker, Manportable Air Defense System (MANPADS), joint and combined arms]. Unique FAAD C2I software will provide this mission capability by integrating FAAD C2 engagement operations software with the Joint Tactical Information and Data System (JTIDS), Single Channel Ground and Airborne Radio System (SINGARS), Enhanced Position Location Reporting System (EPLRS), Global Positioning System (GPS), Airborne Warning and Control System (AWACS), Sentinel, and the Army Battle Command System (ABCS) architecture. Provides joint C2 interoperability and horizontal integration with PATRIOT, THAAD, MEADS and SHORAD weapon systems. FAADC 2I is the first system to digitize for the First Digitized Division/First Digitized Corps (FDD/FDC).

JUSTIFICATION: FY 2001 dollars will be used to procure, integrate, and field Common Hardware Systems (CHS) computers, displays and tactical software to field two (2) National Guard units by FY02. FAAD C2 enables maneuver commanders to receive air and missile attack warnings, provides common tactical air picture, (target alerts, initial cues and tracks) with Corps, Division, Brigade, and Battalion and disseminates resulting BM/C4I planning and engagement data to the individual SHORAD weapon system. FAAD C2 also enables the alerting of air defense gunners, enhances capability for air space battle management, and automated uplinks for acknowledgment of mission plans and unit positions, enhancing force protection.

* 2 additional prior years units procured during development with RDT&E funds for a total of 45 units.

** Does not include all SAR data; SAR includes FAAD C2 and Sentinel (Ground Based Sensor)

DESCRIPTION: The Air and Missile Defense Planning and Control System (AMDPCS) is the backbone of air defense which provides BM/C4I capability to Air Defense Artillery Brigades, the Army Air and Missile Defense Command (AAMDC) Corps and Echelons Above Corps (EAC) headquarters, and joint force command and control elements, such as the Battlefield Coordination Detachment (BCD). The AMDPCS provides ADA Brigades with a fire control system (FCS) via the Air Defense System Integrator (ADSI) for monitoring and controlling engagement operations by subordinate battalions. The AMDPCS provides a common air and missile defense staff planning and battlespace situational awareness tool via the Air and Missile Defense Workstation (AMDWS) to achieve the common tactical and operational air picture. The AMDWS, like ADSI, will be fielded to air and missile defense units at all echelons of command, battery through theater. The AMDPCS provides the ABCS architecture and the Army AMD Task Forces (AMDTF) with BM/C4I capability and the Army component of interoperable Joint Theater Air and Missile Defense (JTAMD) BM/C4I. The AMDPCS enables Active, Passive and Attack Operations coordination with the joint forces.

JUSTIFICATION: FY 2001 dollars will be used to procure computer hardware and software and ancillary equipment for fielding to air and missile defense units. This is not a new start, previously funded under AD5050.

The Forward Entry Device is an integral part of the digitized system architecture. It is a programmable input/output device used for composing, editing, transmitting, receiving and displaying alphanumeric and graphic messages for transmission over standard military radios. Forward Observer Software(FOS) enables user to plan, control and execute fire support operations at maneuver platoon, company battalion, and brigade levels. It provides the vital sensor to shooter link required for effective fires.

The original FED program consisted of Forward Observer Command and Control (FOCC) and Meteorological (MET) Survey software on a Simplified Handheld Terminal Unit. In order to support the DOD mandated interoperability requirements, the FED was upgraded to the Lightweight Forward Entry Device (LFED). The LFED replaces the FED which became obsolete in FY99. The LFED utilizes CHS II components including the Handheld Terminal Unit (HTU) with associated peripheral devices.

The requirement for the BFIST/STRIKER has been realigned to the LFED, due to change in operational concept to utilize the FOS. The hardware platform for the BFIST/STRIKER will consist of a mix of new and redistributed Lightweight Computer Units (LCUs) until FY01 when the Variable Computer Unit (VCU) will be procured and fielded.

Justification: In FY01, a total of 596 units will be procured, which will be distributed to 3 Separate Mechanized Brigades, 8 Separate Infantry Brigades, 2 Separate Armored Brigades, 1 Armored Cavalry Regiments and 2 Infantry Divisions.

DESCRIPTION: The Striker program integrates the Bradley Fire Support Vehicle (BFIST) mission equipment package (MEP) into a HMMWV chassis supporting heavy and light force fire support operations. The Striker program is a continuation of the BFIST program designed specifically for the Combat Observation Lasing Team (COLT) in heavy divisions and light divisions. The Striker was approved as a Warfighting Rapid Acquisition Program (WRAP) designed to get the Striker operational enhancement to the soldier quickly at the best cost.

JUSTIFICATION: The Striker program modifies components of existing systems and leverages acquisition resources already dedicated for the BFIST program. The Striker program will also leverage test and development activities, along with providing for Horizontal Contract Integration (HCI) across platforms. This strategy will reduce costs and acquisition time, while also affording greater adaptability of the Striker kit to common wheeled platforms.

Wpn Sys Proc U/C												

Description: Life Cycle Software Engineering (LCSE) support, by the Software Engineering Center, provides the essential services needed to maintain CECOM managed fielded Battlefield Automated Systems (BAS) in a state of operational readiness. The Mobile Subscriber Equipment, Firefinder, TRITAC Switches, and Intelligence/Electronic Warfare Systems are some of the 221 BASs supported by the SEC that directly depend on LCSE support to maintain a posture of mission critical readiness. Adequate funding for LCSE support is essential for the acquisition, operation, maintenance and sustainment of multi-host computer systems, peripherals, interfaces, support equipment, test beds, components, and software used to provide the necessary services and support to maintain BASs in the state of operational readiness.

Justification: Policy for PPSS requires that system managers provide initial host capabilities for new systems, and that the Life Cycle Software Engineering Centers (LCSEC) provide upgrades and replacement of obsolete equipment. Significant portions of host and network equipment are five years old or older and/or reaching obsolescence. There is the requirement to respond to emergency requests from the field for Software Engineering support in order to maintain operational readiness of deployed BASs. With host computers, peripherals (e.g., memory storage devices, terminals, keyboards, and printers, media and replication equipment) having a life-span of approximately five years and the SEC performing its mission over a continuous period of time beyond five years, equipment must be replaced and/or upgraded regularly to deal with obsolescence and to take advantage of the continual improvements in technology that are indigenous to high-technology based weapon systems and their software support environments in order to meet the ever increasing mission requirements imposed by the field. Funding for this task is essential to provide and maintain the software support environments and LCSE support required to maintain fielded BASs in a state of operational readiness, worldwide, to support the Soldier in the field.

DESCRIPTION: LOGTECH or Automatic Identification Technology (AIT) provides state-of-the-art technologies that offer rapid and accurate data capture, retrieval and transmission. The technology includes various radio frequency barcode scanning devices, barcode label and page printers, and various data carrier devices with associated readers and writers. The data carrier devices include optical laser cards, integrated circuit chip cards (smart cards) and PC memory cards. AIT devices are used with automated logistics systems to facilitate and expedite property receiving, distribution, storage, inventory management and accountability. AIT is used throughout the Army at the wholesale (AMC) and retail (STAMIS) supply levels and in automated maintenance, personnel and transportation systems, where rapid and accurate source data collection is required. The AIT contract establishes a baseline of AIT devices for use throughout DoD and ensures standardization and interoperability of this equipment among the Services.

JUSTIFICATION: FY01 fieldings support Depot Systems Command, Major Commands and Army STAMIS with AIT and Radio Frequency Portable Data Collection Device (RFPDCD) Networks and printers. Funds will continue these essential initiatives, satisfying logistics requirements in the tactical and nontactical arenas.

FY01-05 funding profile reflects the Information Technology transfer among the OMA/RDTE/OPA appropriations.

DESCRIPTION: Transportation Coordinator-Automated Information Movements System II (TC-AIMS II) is a joint program which will consolidate management of the unit/installation-level transportation functions of Unit Movement, Load Planning and Installation Transportation Office/Traffic Management Office (ITO/TMO) operations into a single automated capability for use throughout DoD. Reducing systems redundancy, functionalities of unit movement, load planning and ITO/TMO transportation Automated Information Systems (AISs) will be migrated into TC-AIMS II applications. TC-AIMS II will provide a common hardware suite running software applications designed for easy data retrieval, data exchange and connectivity to relevant external sources. Open systems architecture is emphasized throughout for standardization and interoperability and for ease of system growth and maintenance.

JUSTIFICATION: TC-AIMS II will provide critical data to the Global Transportation Network and Service-designated Command and Control systems. TC-AIMS II is the foundation for joint transportation process improvement. FY01 funding procures hardware upgrades for existing TC-ACCIS and DAMMS legacy systems, TC-AIMS II hardware for Army early deploying Power Projection Platforms and Power Support Platforms, and COTS software licenses to support up to 21K users.

FY01-05 funding profile reflects the Information Technology transfer among the OMA/RDTE/OPA appropriations.

DESCRIPTION: The Gun Laying and Positioning System (GLPS) will be a modular, lightweight, cost effective Non-Developmental Item (NDI) that will give each towed and self-propelled non-Paladin firing battery autonomous positioning and directional capability. The GLPS will rapidly self-locate and determine azimuth/deflection and position (Universal Transverse Mercator (UTM) coordinates and altitude) of each howitzer from one centrally located orienting station. The GLPS will consist of a tripod mounted gyroscope integrated with an electronic digital optical instrument, eye-safe laser rangefinder, and transport case(s). Use of the GLPS also requires the AN/PSN-11 Precision Lightweight Global Positioning System (GPS) Receiver (PLGR), which has already been authorized in FY00.

JUSTIFICATION: The GLPS system will decrease the time required to survey and lay a howitzer battery from 2 hours to 14 minutes. The GLPS is required in FY01 to displace one of the two Position and Azimuth Determining Systems (PADS) and the associated PADS crew within each Field Artillery Battalion. The FY01 funding is a continuation of GLPS production to be fielded to the active Army and National Guard.

DESCRIPTION:
Integrated System Control (ISYCON (V1 & (V2) provides a centralized capability for planning and managing all tactical communication networks on the battlefield; and interface with each battlefield functional area in the ABCS. The ISYCON (V1 & (V2) serves as the architectural foundation on which to build network management at Division through Echelons Above Corps. The ISYCON (V1 & (V2) software will reside on CHS II Hardware Platforms in a client/server architecture. The server terminals are located in SICPS Shelters, and client terminals are located in the SICPS tent. The major functions of ISYCON (V1 & (V2) are network planning and engineering, signal command and control, battlefield spectrum management, wide area network management and COMSEC management. The emergence of data networks at all echelons, and specifically the Tactical Internet, has caused greater responsibility on ISYCON as the focal point for managing the interconnection of C3S systems. ISYCON (V1 & (V2) is key to successful communications management for the First Digitized Division (FDD)/First Digitized Corps (FDC), and is a critical part of the Army Vision 2010 for Information Dominance. The ISYCON V4 (Tactical Internet Manager) is a requirement based on a change to the ISYCON Required Operational Capability (ROC), calling for Network Management for the Lower Tactical Internet and TOC LAN. It will perform network planning, initialization, management and monitoring of the Tactical Internet at Brigade and Below (EPLRS, SINGGARS, FBCB2) as well as TOC LAN'S. At Brigade and Below the Tactical Internet Manager resides in the signal officer vehicle.

<p>Justification: The ISYSCON program provides the network management of WIN-Terrestrial (WIN-T); interfaces with battlefield functional areas in ABCS; and initial planning of joint communications management protocols; and solves significant shortcomings in today's network management systems. FY 01 provides funding for hardware, facilities and software licenses, to facilitate network management support for First Digitized Division (FDD) and First Digitized Corp (FDC) requirements. ISYSCON (V)4 will perform network management of the Tactical Internet and TOC LAN's. FY01 provides funding for ISYSCON (V)4 purchase of hardware and software integration for 1st Cavalry Division. The Tactical Internet Manager will require the acquisition of Applique plus platforms, ruggedized laptops, and software licenses.</p>

DESCRIPTION: The Maneuver Control System (MCS) is an automated tactical Command, Control and Communications (C3) system which provides a network of computer terminals to process combat information for battle staffs. It provides automated assistance in the collection, storage, review and display of information to support the commander's decision process. Both text and map graphics are provided to the user. It enables operation staffs (G3/S3) to process and distribute situational awareness, estimates, plans, orders and reports. The system is designed to operate with existing and planned communications networks. The MCS program is an evolutionary development including planned system improvements to insure increasing Command and Control (C2) capabilities and infusion of current technology while, in the interim, providing an essential core capability.

IAW USD (A&T) memo dated 10 Dec 98, MCS was realigned to better represent current efforts and synchronize requirements and schedules with the First Digitized Division. Funding and quantities from FY97 and prior are considered sunk, and are no longer addressed in the P-Forms.

JUSTIFICATION: MCS is an essential component of the Army Battle Command System (ABCS) and provides critical coordination among Battlefield Functional Areas (BFAs) within each echelon. MCS provides the Common Tactical Picture (CTP) software supporting battlefield situation display for all ABCS BFAs. The CTP depicts information provided by all the BFAs and includes a Situation Map, control measures, Intelligence and Electronic Warfare graphics, Fire Support graphics, combat service support location information, air corridors and air defense weapons control information.

The MCS Common Hardware/Software (CHS) equipment is needed to equip the total force with an automated C2 capability. This program is an integral part of the ABCS and is critical to the successful operation of the overall system. This generation of computers will incorporate advances in technology and achieve Life Cycle Cost savings due to commonality of support.

FY01 funding of \$22.9 Million will be required to purchase computer systems for First Digitized Corps Units such as the 1st Cav Div and III Corps to support the MCS Block IV Initial Operational Test and Evaluation (IOT&E).

DESCRIPTION: STAMIS Tactical Computers (STACOMP) are a group of Commercial Off-the-Shelf (COTS) computer systems supporting STAMIS tactical computer requirements for the US Army. These systems, used by soldiers on the battlefield to support Combat Service Support (CSS) missions at all levels, are transportable and user friendly. STACOMP COTS supports life cycle replacement of the existing logistics STAMIS: Standard Army Retail Supply System (SARSS), Standard Army Ammunition System (SAAS), Standard Army Maintenance System (SAMS), and Unit Level Logistics System (ULLS), as well as Global Combat Support System-Army (GCSS-Army) and Standard Installation Division Personnel System-3 (SIDPERS-3). SIDPERS-3 completes Active Component (AC) fielding in October 1999 and continues Reserve Component (RC) fielding FY00-02.

GCSS-Army is the premier logistics information system being developed to support the logistics management capability for the Army Transformation. It will be the business/tactical automation enabler for the total Army CSS mission area and will constitute the Army portion of the GCSS. GCSS-Army will be implemented in three tiers: Tier 1 will integrate and consolidate 13 existing logistics system baselines. Tier 2 will integrate the logistics wholesale and retail levels of CSS. Tier 3 will implement all required interfaces with CSS systems of the Joint community, national sustaining base and applicable allied systems. Milestone 0/II approval for GCSS-Army, Tier 1 and Milestone 0 approval for Tiers 2 and 3 was granted in May 1997. Development and fielding of GCSS-Army will follow an incremental acquisition strategy combining development with incremental fielding of capability packages. GCSS-Army will consist of six major modules – Supply/Property, Maintenance, Ammunition Supply, Supply Support, Integrated Materiel Management and Management. Milestone III for initial deployment of Tier I is scheduled for 4QFY00.

JUSTIFICATION: FY01 funds acquisition and fielding of COTS computers to continue: life cycle replacement of the existing logistics STAMIS; GCSS-Army hardware, SIDPERS RC fieldings and STAMIS support systems. **FY 2001-2005 funding change is due to PBD 205 implementation of HAC Report 106-244, Page**

<p>DESCRIPTION: This program includes the procurement of five command post variants, each designed to accommodate the various Battlefield Functional Areas and Tactical Operations Centers (TOCs) of the Army Battle Command System (ABCS). These include the Army Tactical Command and Control System (ATCCS) (to include Maneuver Control System (MCS), the Advanced Field Artillery Tactical Data System (AFATDS), the Combat Service Support Control System (CSSCS), the Forward Area Defense Command and Control System (FAADC2), the Air and Missile Defense Planning and Control System (AMDPCS), the All Source Analysis System (ASAS), and the Integrated Meteorological System (IMETS)). The five command post variants are:</p> <p>(1) A Tent Command Post (CP) that consists of a lightweight aluminum frame, interchangeable fabric wall sections, fabric roof, floors and liners, work tables, mapboards, and light set. The Tent CP can be complexed to other tents and to other SICPS variants via an interface wall.</p> <p>(2) A Rigid Wall Shelter (RWS) CP mounted on the Heavy High Mobility Multipurpose Wheeled Vehicle (HMMWV) Shelter Carrier consisting of an on-board generator, power conversion/distribution system, environmental control unit, collective chemical protection, signal and power pass-through panels, antenna mounts, equipment mounts, equipment racks to accommodate two ABCS workstations, operator seats, a vehicle intercom system and a 10 meter Quick Erect Antenna Mast (QEAM).</p> <p>(3) Conversion Kits for the M577 Track Vehicle consisting of equipment racks for two ABCS workstations, power and signal panels, tent interface panel, operator seats, antenna mounts, stowage provisions, an updated Auxiliary Power Unit (APU), a vehicular intercom system, a power distribution system, a 10 meter QEAM, and a signal/data wiring module. The converted M577 has been designated the M1068 Track CP.</p>

Program Elements for Code B Items		Code	Other Related Program Elements	
<p>(4) Installation Kits for the 5-Ton Expandable Van (E-Van) consisting of racks for up to six ABCS workstations, centralized communications rack, communications patch panel, signal entry panel, antenna mounts, mapboards, a vehicular intercom system, a 10 meter QEAM, updated power distribution wiring and signal/data wiring.</p> <p>(5) Installation Kits for the Soft-Top HMMWV consisting of equipment racks for up to two ABCS workstations, communications patch panel module, antenna mounts, operator work surface, data patching module, white canvas liners, blackout curtains and a 10 meter QEAM.</p> <p>JUSTIFICATION: The Standard Integrated Command Post System (SICPS) is essential to the Army's Force XXI efforts. It provides the mobile and environmentally protected platform for the ABCS which is a major part of the Army Chief of Staff's effort to digitize the battlefield. Procurement of each of the above variants is required to support the fielding of the noted ABCS nodes with the Army's Common Hardware/Software Command and Control equipment.</p>

DESCRIPTION: Army Training Modernization includes three related efforts to acquire Digital Training Facilities (DTF). DTF will allow rapid delivery of high quality instruction to Army personnel. Infrastructure acquired will be based on industry standards and will comply with the Joint Technical Architecture (JTA) and Defense Information Infrastructure Common Operating Environment (DII COE), where applicable. This will help assure compatibility with other military services and that commercial, state, and other resources can be leveraged to achieve cost effective solutions to support all Army components. Specific initiatives include Distributed Training Technology (DTT) (BE4171), Other Training Modernization (BE4172), and The Army Distance Learning Program (TADLP) (BE4173). Other Training Modernization modernizes/enhances DTF at existing Army resident schools to improve training provided through them and allow their use to broadcast training to remote DTF deployed through DTT and TADLP. DTT and TADLP will together provide 841 modern distance learning enabled DTF and associated supporting infrastructure to augment training facilities at existing resident Army schools. This will allow Army to both increase the number of Army personnel receiving required training and the amount of training that can be provided to each individual.

Army Training Modernization provides a cost effective solution means to provide training to Army personnel. This will aid Army to maintain acceptable outyear readiness levels despite massive resource reductions. Supported training enhancements will help reduce the current backlog of over 90,000 soldiers that require MOS training. Army can significantly increase levels of MOS qualification, hence readiness, with standardized Army courseware delivered through Distance Learning (DL) technology. Implementation of these technology enablers will reduce resident training requirements and soldiers will spend less time in the training base and more time in units, thereby increasing readiness. Without this investment, Army schools will be unable to export the expertise and standardization provided by master instructors and subject matter experts; the full benefits of Army courseware already updated or currently being updated will not be realized; soldiers will not be able to receive training where and when needed; and the problem of training backlog will be exacerbated. Army Training Modernization will deliver standardized training to Active Component (AC) and Reserve Component (RC) soldiers. DTT/TADLP provide infrastructure for soldiers to train at or near their assigned station, in lieu of resident training at Army schools. The Classroom XXI component of Other Training Modernization provides infrastructure at sites collocated with Army schools. Operational implementation of this infrastructure is carefully phased to coincide with development of updated Army courseware, taking into account the number of soldiers needing training, types of training needed, and where training is needed to maximize the return on the Army Training Modernization investment. Tasks supported include conducting training and receiving training.

JUSTIFICATION: FY 01 funds allow acquisition of Digital Training Facilities (DTF) and supporting infrastructure to augment and enhance existing Army training capabilities based on a synchronous training model and implement enhanced training capabilities based on asynchronous training methods. This will help maximize both the utility of the already installed training infrastructure and the return on future training infrastructure investments.

<p>DESCRIPTION: The Army Distance Learning Program (TADLP) will provide standard automation and supporting infrastructure to improve Army's ability to train service members and supporting civilian workers in all Army components (Active, Guard, and Reserve). It will aid the Army to properly train all components to a single Army standard. TADLP supports readiness by enhancing institutional and individual training.</p> <p>TADLP provides both near term and long term infrastructure to enhance training of all Army components, particularly in the areas of military occupational skill qualification (MOSQ) and reclassification. It also provides a highly effective means to deliver training and education to deployed forces. The TADLP goal is to leverage technology and learning theory to provide just-in-time training to each service member regardless of location. TADLP goals include reduced training delivery and training support costs; improving service member morale by allowing members to obtain required training without leaving their home station; improved efficiency and effectiveness of Army instructors by allowing each instructor to train more students in a shorter period of time; and improved unit readiness due to the reduction in personnel turbulence resulting from long term absence for resident training.</p> <p>JUSTIFICATION: In FY 01, Army will continue full-scale implementation of infrastructure to support Army training at remote sites for a major subset of existing Army courses. This supports implementation of an initial suite of asynchronous training tools to augment and enhance existing Army training instruments. Efforts support redesigned courses and training instruments that can leverage technological advances and the application of modern learning theory. This will maximize the utility of this training to each student while reducing the time required by the student to complete assigned blocks of training. Efforts will continue to deploy modern, user friendly learning environments to support all service members.</p>

Description: OTHER TRAINING MODERNIZATION supports multiple TRADOC Initiatives. These include Classroom XXI (CR XXI); the Army Doctrine and Training Digital Library (ADTDL); the Automated Instructional Management System - Redesign (AIMS-R); and the Army Systems Approach to Training (ASAT).

CR XXI provides an advanced instructional technology environment in which the soldier of the 21st century will train. This TRADOC initiative modernizes institutional training classrooms with information age technology into Digital Training Facilities (DTF) to gain training efficiencies, while maximizing soldier training effectiveness. Achievement of this environment requires investments in hardware, software, facilities and communications. The TRADOC CR XXI program is building fully networked, high technology, student-centered DTF to support Army Training Modernization initiatives. Infrastructure acquired will support multiple capabilities. These include interactive multimedia delivery to student desktops, Internet access, full-motion/full-screen digital video, video teletraining and collaborative computing.

ADTDL, AIMS-R and ASAT help implement the Warfighter XXI Campaign Plan. This plan provides a strategic vision/integrated strategy for how Army will train battle staff and collective tasks. These acquisitions will automate the training management system to enhance planning, resourcing, execution, and assessment of battle focused training for the unit/unit commander. ADTDL provides unit/institutional commanders access to data needed to plan, resource, execute, and assess training.

JUSTIFICATION: Beginning in FY 01 funds are in support of Classroom XXI only. These funds allow continued modernization of classrooms to DTF and implementation of Digital Training Access Centers (DTACs) colocated with Army schools to support use of redesigned courseware in these DTF and transmission of redesigned courseware to remote DTF. DTACs store approved courseware components in digital (automated) format for access and distribution to any Army DTF (CR XXI, DTT, and TADLP) as needed. DTF implementation schedule is linked to the schedule for courseware redesign.

DESCRIPTION: This budget line supports the Army's sustaining base automation systems. The Army's primary sustaining base information management (IM) goal is to provide information services for the sustainment and readiness of the forces at minimum cost.

JUSTIFICATION: The current sustaining base automation infrastructure is largely overstressed and reaching technological obsolescence. A stable modernization program is essential to maintain efficiency, increase productivity, and reduce operation and maintenance costs through technological advancement. As the Army modernizes its warfighting forces for the twenty-first century, it must leverage the use of automation technology to streamline and modernize its management information systems to support C4I for the Warrior and power projection strategies, split base operations, and downsized force structures. The effectiveness of the CONUS split base operations strategy to perform as the rear area for deployed forces as well as the mobilization, force projection, and redeployment platform is increasingly dependent upon use of state-of-the-art automation technology to provide responsive combat service support to the warfighter in the areas of command and control, logistics, personnel, finance, transportation, medical and other sustaining base functions.

DESCRIPTION: This supports high payoff initiatives to replace obsolete, inefficient records management systems with state-of-the-art optical digital equipment and other electronic recordkeeping systems. This technology will reduce operations and maintenance costs and improve the mission effectiveness and productivity of records managers throughout the Army.

PERSONNEL ELECTRONIC RECORD MANAGEMENT SYSTEMS (PERMS) : PERMS provides an electronic system for the maintenance and sharing of military personnel files at Army Personnel Records Management Centers for Active Army, Army National Guard, and Army Reserve. PERMS has become the system of record for the Official Military Personnel File (OMPF) because of the initiative to convert paper and microfiche personnel files to digital images. PERMS provides the platform for selective retrieval of Army military personnel documents by DoD customers, federal agencies (Veterans Administration (VA), Department of Labor (DOL)), and individual soldiers. PERMS documents are critical to the Army Selection and Promotion Board process for both enlisted and officer ranks.

DOCUMENT IMAGING PROCESSING SYSTEMS: This ensures Army compliance with Code of Federal Regulations (CFR) 36 and 41 for economy and efficiency in documenting Army business. Use of current and emerging technology reduces operations and maintenance costs and improves mission effectiveness and availability of records throughout the Army.

JUSTIFICATION:

PERSONNEL ELECTRONIC RECORD MANAGEMENT SYSTEMS (PERMS): FY01 funds will complete the purchase of magnetic storage capacity to augment optical storage units, thus providing redundancy to critical military personnel records. These funds also continue the upgrade of automation equipment to replace 1993 LAN components and optical jukebox components. Partial backup/recovery capability is planned with the purchase of tape backup units and the building of a prototype for off-site backup and storage.

DOCUMENT IMAGING PROCESSING SYSTEMS: FY01 funds procure hardware and software required for integration of document imaging and related recordkeeping technology solutions supporting Army-wide management of records. These funds will maximize the benefits achieved through selective integration of technology into the recordkeeping process.

DESCRIPTION: Budget line supports the Total Distribution Program (TDP), an initiative originally put in place by the Vice Chief of Staff, Army (VCSA) to correct deficiencies in the distribution of materiel, equipment, personnel replacements, and mail, which occurred during Operation Desert Shield/Storm. The program is being refocused, at the direction of the TDP General Officer Steering Committee (GOSC), to execute the Distribution Based Logistics System (DBLS) of the future, supporting the Revolution in Military Logistics (RML). The transformation of Army logistics into a distribution-based system relies on distribution velocity rather than redundant mass to provide support to the warfighter. The refocused program is envisioned to integrate all logistics plans, programs, and issues which support the Force Sustainment Domain of the RML. The refocusing effort will combine those still relevant lessons learned during Desert Shield/Storm with emerging issues and projects necessary to achieve the envisioned end state of a DBLS. The purpose of the TDP initiative is to develop an effective distribution pipeline with Total Asset Visibility (TAV) from initial shipping point to destination. Critical corrective actions include development and fielding of communications capability for logistics, the use of emerging technologies to enhance visibility and materiel accountability, upgrade of critical distribution management systems, fielding and maintenance of the required distribution infrastructure, as well as doctrinal changes in distribution management. The TDP supports "Improving Logistics Support in Combat Zones", The Army Strategic Logistics Plan and The DoD Logistics Strategic Plan.

JUSTIFICATION: FY 01 funding develops communications capability for transmission of logistics information both within a theater of operations and between the theater and the sustaining base. Work is underway to interface the Tactical Packet Network (TPN), operating in the tactical environment, with the communications architecture of sustaining base systems, enabling the warfighter to pass data directly to the sustaining base. During the Gulf War, lack of such communications capability was a critical deficiency, which hampered the distribution process. In addition, the volume of materiel moving through the logistics pipeline exceeds the ability to manually track materiel, maintain accurate records and provide timely information to decision makers. Funding supports procurement of Automatic Identification Technology (AIT) such as Radio Frequency (RF) Tags to provide source data automation. RF technology provides rapid and accurate capture, retrieval and transmission of supply/transportation information for container/pallet contents, providing "inside-the-box" visibility of container contents and a means to track critical materiel throughout the distribution pipeline.

DESCRIPTION: This budget line supports the Scaled Model Signature Measurement Facility (SMSMFAC) within the Intelligence and Security Command (INSCOM). The SMSMFAC laboratory develops signature information that is vital to the development, testing, fielding, and reprogramming of present and future smart sensor and munitions systems.

DESCRIPTION: This program satisfies critical needs for advanced computational technology for Army scientists, engineers and analysts, and represents the leading edge of high speed processing. This capability is not available through other technology and is designed to solve problems which cannot be resolved in other ways. The program provides for access to supercomputing resources consisting of networked supercomputers at various Continental United States (CONUS) locations. Supercomputer systems are required to satisfy critical research and development missions in combat and materiel development programs. Significant advances in supercomputer technology have provided increases in both speed and memory. This is essential for performing fully time-dependent, three-dimensional computations and simulations directed at major new weapon designs or battlefield management. The resultant use of this advanced high-performance computing technology is the generation of very large data sets. In order to effectively and efficiently process this data, robotic mass storage systems are required. Examples of the major Army applications best suited to supercomputer technology include battlefield management, modeling/simulation, weapons systems design, terrain analysis, mechanical design (structural and dynamic vehicles), nuclear survivability, and materiel dynamics and composition. Supercomputers are contributing to efforts for high leverage, high payoff programs which exploit technological advances, reduce logistics burdens, lower acquisition and operation and maintenance costs, and provide required lethality at reduced weight and volume.

JUSTIFICATION: FY 01 funds provide local site and Army specific automation infrastructure in order to allow for the effective use of the Army Research Lab (ARL), which is one of four DoD Major Shared Resource Centers (MSRCs). Funding will procure mass storage, work stations, and network connectivity for Army users of the ARL MSRC and its associated Distributed Centers. The DoD High Performance Computing Modernization Program (HPCMP) is currently spending over \$200M on the Centers but is not providing any funding for service specific infrastructure. Funds will leverage these assets being procured through the DoD HPCMP and capitalize on leading edge technology in multi-terabyte mass storage systems.

DESCRIPTION: Provides funds for information systems that support Army headquarters worldwide. These systems are also included in The Army Modernization Plan.

JUSTIFICATION:
HEADQUARTERS, DEPARTMENT OF THE ARMY (HQDA) AUTOMATIC DATA PROCESSING EQUIPMENT (ADPE): Provides for information management support to Headquarters, Department of the Army (HQDA), across the entire Information Management (IM) spectrum. HQDA ADPE supports the joint Office of the Secretary of the Army/Army Staff (OSA/ARSTAF) Senior Planning Group and other DoD Information Technology (IT) initiatives. FY 01 funds purchase hardware and software to expand and upgrade the HQDA Tracking System. This provides a flexible, integrated, automated system to support the control and management of Executive correspondence, internal actions, and file documentation. Further, it will streamline the flow process of actions within HQDA, reduce the amount of data re-entry and duplication of information, promote data sharing, and provide immediate access to information. FY 01 funds will also purchase hardware and software for the Concepts Analysis Agency (CAA) ADP Modernization project. This will enable the Army's principal theater-level study agency to perform quick reaction analysis for the Army Staff and Major Commands (MACOMS). Decisions based on CAA analyses impact force structure and modernization, logistics, personnel, finance, and every functional area of the Army. FY 01 funds also purchase hardware and software for the Defense Message Service (DMS) for individual users on the HQDA staff. The DMS program was established by the Under Secretary of Defense (Acquisition) to facilitate and coordinate development of an integrated common-user message system within DoD. The primary goal of DMS is to provide a message system that satisfies writer-to-reader requirements to reduce cost and staffing levels; secondary goals include improvement of functionality, security, survivability, and availability.

Exhibit P-40C Budget Item Justification Sheet		Date	February 2000
Appropriation / Budget Activity/Serial No. OTHER PROCUREMENT / 2 / Communications and Electronics Equipment		P-1 Item Nomenclature HQ MANAGEMENT INFORMATION SYSTEMS (BE4161)	
Program Elements for Code B Items	Code	Other Related Program Elements	
<p>(continued)</p> <p>ARMY MODEL IMPROVEMENT PROGRAM (AMIP): AMIP is designed to improve the Army's analytic capability by providing a consistent basis to support decision making affecting force structure, doctrine, and procurement. AMIP directly supports Principle 10, Exploit Modeling and Simulations, of the Army Enterprise Strategy. By using state-of-the-art hardware and new software technology, AMIP will develop an integrated family of computerized combined arms combat models with supporting data bases. These models will support studies, research, and training. Component models will be interfaced and tested for validity and consistency of representations and results. The FY01 funds procure state-of-the-art computer simulation and graphics equipment/software. The equipment will be used by numerous analysis agencies, MACOMs, and national laboratories to develop more efficient, cost effective, realistic scenarios and real-time simulations of complex combat and associated processes for analysis of data. The achievement of these goals will provide readily understood, valid, and more responsive input into the decision making process affecting weapons procurement, force development, tactics, sustainment, and enhance the overall warfighting capability of the Army. The funds will also provide for the upgrading of existing simulations/support equipment and software.</p> <p>HOUSING OPERATIONS MANAGEMENT SYSTEM (HOMES): HOMES is a standard management system designed to provide efficient processing of soldiers' housing needs. It consists of four subsystems: Family Housing Subsystem (FHS) consisting of: (1) Assignments and Terminations (A&T) that supports the management of Government controlled housing; (2) Community Homefinding Relocation Referral Services (CHRRS) for help in locating off-post housing; Billeting (BIL) supports transient billets, Fisher houses, guesthouses, Bachelor Officers' Quarters (BOQ) and Senior Bachelor Enlisted Quarters (SBEQ); Furnishings Management (FURN) that supports controlling and managing the furnishings inventory; and System Administration (SA) that provides a menu driven capability for administering the hardware and software for the above systems. HOMES increases availability of housing services, housing utilization, housing inventory control and the control of Basic Allowance for Quarters (BAQ). It also supports upward reporting needs and the elimination of the housing questionnaire survey process. The four subsystems are fully deployed worldwide. HOMES has been identified as a critical element of the Army Family Housing Action Plan to improve the level of housing services to soldiers and families. The system operates on INTEL 310/320's, AT&T 3B2, 486 and Pentium workstations, and HP9000 minicomputers, located in the local housing and billeting offices. FY 01 funds purchase replacement equipment for the FHS/FURN/SA subsystems. The equipment included will be computers, printers, high speed batch printers, and communications equipment. HOMES is a centrally managed system, where all software is developed and all equipment is identified, tested and approved centrally. Since initial fielding of HOMES, Army installation Housing Offices have become dependent on the system to fulfill their mission-management of Army housing inventory and its military occupants. The current reassignment of Army units and concomitant relocation of personnel is too large an activity to be managed without an automated information system. An equipment failure effectively closes a housing office operation. The HOMES Project Plan has been modified to accommodate re-engineering of Army Housing operations. The re-engineering focuses on improving efficiency of operations and support for Commercial Venture Initiatives (CVI). The re-engineered system will be Windows NT based and conform with the directions promulgated in the DoD Technical Architecture For Information Management (TAFIM). This architecture will support the integration of the HOMES system with local office automation.</p> <p>STRATEGIC C2 FACILITIES: Provides funds for the Army Operations Center (AOC) and the Command and Control Support Agency. Funding is necessary to maintain state-of-the-art information management capability for the Army Staff, DoD Domestic Support (DOMS) activities and senior leadership of the Army and to obtain a completely integrated multi-level secure system with full connectivity to DoD's Global Command and Control System (GCCS) as well as connectivity to Federal and local government activities engaged in Disaster support operations. The system currently includes the HQDA GCCS/GCCS-A server suite of equipment; extensive COTS, and contractor developed support software; a variety of workstations connected to two separate Local Area Networks (LAN) with over 250 users; an Automated Message Handling System (AMHS); a Credential Access System (CAS); and a Briefing Display and Support System (BDS), and application tools to manage Army readiness, mobilization, and deployment data. A fully integrated desktop with user friendly tools and access to most Army and DoD databases is a key AOC goal. The system supports every military operation involving the Army and every Disaster relief operation engaged in by DoD. It allows the Senior Army leadership and Army/DoD officers to quickly access, manipulate, display, brief and send command and control directives and mission essential information. The system supports day-to-day operations within the Army Operations Directorate, all crisis actions and JCS/HQDA exercises, as well as all DoD DOMS. FY 01 funds will procure critical components for the LAN and BDS systems. These components will improve reliability, broaden and enhance systems management capabilities, bolster security, and maintain compatibility and integration with the GCCS/GCCS-A and other Army unique and Joint Staff systems. Procurements will focus on additional computer operations management tools; increased critical component redundancy; enhanced systems security and security monitoring; continued improvement to Crisis Action Team (CAT) Tracking System for the AOC; LAN expansion, bridges, hubs, routers, and as technology permits, implementation of Secret And Below Inter-operability (SABII).</p>

<p>(continued)</p> <p>SITE R INTEGRATION PROGRAM (SRIP): This budget line supports maintenance and modernization of the C4I infrastructure at the Alternate Joint Communication Center (AJCC) - Site R. The AJCC includes communications facilities at Site C, Site RT, and the underground facility at Site R which houses the Alternate National Military Command Center (ANMCC). As the alternate site for the National Military Command Center (NMCC), Site R must provide facilities for a seamless transition of NMCC functions in times of crisis or when the NMCC is not otherwise available. The SRIP ensures that as the NMCC systems and operating procedures evolve, the Site R facilities keep pace and are capable of supporting the full range of national Command and Control missions. FY 01 funds purchase hardware, software, and engineering services for Implementation of the National Command and Control System (NCCS) in Site R.</p>

DESCRIPTION: This supports automation systems requirements of Major Army Commands (MACOMs) and activities not included in other centrally managed programs. These requirements conform with the Army's Information Management (IM) Architecture and are included in MACOM IM Modernization Plans. Funding has been programmed to accomplish high priority/high payoff initiatives which offer efficiencies and improvements in mission support and reduce operations and maintenance costs. Acquisitions will be accomplished primarily through standard requirements contracts.

JUSTIFICATION:

MACOM AUTOMATION SYSTEMS: FY 01 funds support systems modernization/life cycle replacement throughout Forces Command (FORSCOM), US Army Europe (USAREUR), Training and Doctrine Command (TRADOC), Army Materiel Command (AMC), Military District of Washington (MDW), Eighth US Army (EUSA), US Army Pacific (USARPAC), US Army Recruiting Command (USAREC), Army Signal Command (ASC), Army War College (AWC), Criminal Investigation Command (CIDC), U.S. Army Medical Command (MEDCOM), and Intelligence and Security Command (INSCOM). Acquisitions include hardware, software, networking products, and peripherals that are required for MACOM/end user level systems architecture and the transition to an Open Systems Environment (OSE). These systems perform vital functions throughout the sustaining base, and modernization is essential to accommodate growing information processing requirements with declining manpower resources. This funding is necessary to provide life cycle replacement of obsolete Information Processing Equipment (IPE), which will eliminate excessive maintenance costs and facilitate productivity growth through advances in information systems technology, thus streamlining manpower intensive operations. Funding will also support MACOM efforts to reengineer business processes, infrastructure to support leaner organizations, and the total compatibility and interoperability needs of a force projection Army.

Exhibit P-40C Budget Item Justification Sheet		Date	February 2000
Appropriation / Budget Activity/Serial No. OTHER PROCUREMENT / 2 / Communications and Electronics Equipment		P-1 Item Nomenclature	MACOM AUTOMATION SYSTEMS (BE4162)
Program Elements for Code B Items	Code	Other Related Program Elements	
<p>(continued)</p> <p>ARMY ENTERPRISE ARCHITECTURE (AEA): The AEA directly supports the need to address business process improvements, develop interoperable information resources, recommend protocols and standards for information technology and plan an interoperable C4i architecture. The AEA works directly to establish the information framework to support Joint and Army information (technology) visions, architectures and plans designed to win the battlefield information war and dominate maneuver battle. Funding will provide a full range of Army-wide services, to include technical integration of software architectures and data management, domain engineering, and internet services, including education in domain engineering, software reuse and data management. Funding also supports Army-wide common operating environment, data modeling and data standardization efforts, access to Joint Technical Architecture - Army and internet web page and list server design, development and maintenance use. FY 01 funds will provide the resources necessary for the on-going development of the AEA infrastructure and procurement of hardware, software, and modeling tools necessary to provide both the combat and the materiel development communities with integrated systems critical to the development of a shared data environment. These funds will target specifically the Systems and Operational Architecture production tools. The objective products include standard data elements, activity models, data architectures, data models and systems Architecture components for Force XXI Digitized Corps/Division, Army After Next Corps/Division, Joint and Echelons-Above-Corps (EAC) operations and training. This infrastructure will substantially improve the Army's ability to produce and share dynamic models, based on doctrinally developed static representations of information exchange requirements. These tools are needed to continue the migration of materiel developers programs (weapons, C4i, and sustainment systems) to the DoD Common Operating Environment. The AEA infrastructure will provide significant contributions to the Army's and DoD's Data Standardization Program with an increased ability to share, reuse, and manage all data products within the Joint Community. Additionally, these funds will provide the tools necessary to synthesize live and virtual environments which will be essential for the C4i community to capitalize on the latest modeling and simulation technology. Funds also continue implementing reuse and data administration initiatives within the Army in coordination with the AEA. Use of the Army Enterprise Architecture concepts are expected to increase the quality of software development projects by increasing productivity and system reliability, by reducing software maintenance costs and by promoting greater standardization and reuse of software products</p> <p>ARMY WARFIGHTING EXPERIMENT (AWE): Funds support modeling, simulation and Joint Venture analysis for the Joint Contingency Force AWE in FY00 and the Division Capstone Exercise in FY01. Funds purchase equipment that provides the capability for constructive, virtual and live simulation for examination of warfighting concepts across Army's domains of Doctrine, Training, Leader development, Organization, Materiel and Soldiers (DTLOMS). FY 01 funds purchase equipment which will augment current materiel used for ongoing Training and Doctrine Command (TRADOC) efforts to analyze information operations, support Operational/Systems Architecture development, evaluate the impact of Army light forces during deployment, explore ways to improve force projection, and enhance the Army contribution to the joint warfight. TRADOC funding upgrades wide-area network communication devices and critical capabilities for the Joint Virtual Laboratory and Battle Lab/DoD Simulation Centers and Critical Government Furnished Equipment/Contractor Furnished Equipment (GFE/CFE) components for development and the expansion of the Battle Combat Team. GFE/CFE is comprised of vehicles, trailers, generators, and the core digital systems of Army Battle Command System (ABCS), Army Tactical Command and Control System/Force XXI Battle Command Brigade and Below (ATCCS & FBCB2).</p> <p>TRADOC INSTITUTIONAL ARMY TACTICAL COMMAND AND CONTROL SYSTEM TRAINING BASE: The Army Tactical Command and Control System (ATCCS) is the principle digital command and control system for battlefield commanders from battalion to corps. The TRADOC Institutional ATCCS Training Base must be fielded to these schools/centers: Combined Arms Center, Combined Arms Support Command, Combat Training Centers, Air Defense, Signal, Engineer, Military Police, Chemical, Special Operations, Aviation, Armor, and Infantry. The focus for this training base within these schools is educating future combined arms commanders, battle staffs, and soldiers to exploit the new digital capabilities on the battlefield. The resulting capability enables these schools to meet their responsibility for creating a networked Army Battle Command System (ABCS) learning environment to transition soldiers from analog to digital thinking and warfighting. FY01 funds procure common hardware and software and field them to the following schools/centers: Command and General Staff Officer's Course, Combined Arms Services Staff School, School for Advanced Military Studies, Sergeants Major Academy, Signal School/Center, and the National Training Center.</p>

<p>(continued)</p> <p>TRAINING ARMY WARFIGHTING EXPERIMENT (TAWEX): Training requirements in support of the Army Warfighting Experiment (AWE), supporting the Army's vision for designing and training the force for the 21st Century through large scale experiments and exercises. Objectives of the Army Warfighting Experiments are to provide validation and quantifiable data to support changes to force design. The Army's intention is to use AWEs as the central focus to identify and validate critical decisions related to future organizations, equipment, training, and doctrine. Training and Doctrine Command (TRADOC) is the key decisionmaker in AWE design and execution as part of Force XXI and Army After Next (AAN). These funds support core AWE training functions. FY01 funding directly supports the Army Experimental Campaign Plan (AECPP) which includes two axes (Heavy and Light). Funding requirements support training for several Army MACOMs and agencies, i.e., TRADOC, Forces Command (FORSCOM), Operational Test and Evaluation Command (OPTEC), TRADOC Analysis Command (TRAC), and Program Executive Officer for Command, Control and Communications Systems (PEOC3S). Funding is required to upgrade existing live, virtual, and constructive training systems and to integrate digitized systems. Future training systems must be developed with digitization as an integral design aspect. Integration and modification to simulations represent unique characteristics of systems and processes resulting from digitization and integration of C4i systems. Digital training support packages are required by 4ID Brigade for train-up for Division Capstone Exercise (DCX) and Corps AWE. This funding also provides a train-up capability for section and staff team training, and ability to conduct staff drills. Funding provides Command, Control, Communications, Computers and Intelligence (C4I) communication linkages hardware for the AECPP digitized exercises. It also provides upgrades to Simulated Area Weapons Effect (SAWE)/ Multiple Integrated Laser Engagement System (MILES) kits (includes a vehicle detection device) to ensure tactical engagement simulation system play is accurate. Funding further provides instrumentation and equipment for data collection for systems participating in the DCX, as well as live instrumentation and equipment for data collection at the National Training Center (NTC) (Heavy axis) and the Joint Readiness Training Center (JRTC) for the Joint Contingency Force (JCF) (Light axis) AWE.</p>

DESCRIPTION: This budget line provides for the purchase of automated data processing equipment (ADPE) for management information systems in the personnel community. The systems are part of the approved Personnel System architecture and the Army Modernization Plan.

JUSTIFICATION:
PERSONNEL ENTERPRISE SYSTEM-AUTOMATION (PES-A): PES-A is an ADP acquisition and redesign/implementation program which ensures that adequate, modern, state-of-the-art automation infrastructure (automation training, computer platforms, services, telecommunications and productivity/automation tools) is available to support the warfighter. The PES-A supports all five personnel functions, including recruiting, and is key to execution of day-to-day operations within the Army (e.g., strength accounting, personnel movement, assignment actions, career management, training, recruiting, reenlistment and mobilization). It is the vehicle by which personnel are managed and information is provided to DoD, and ultimately, to Congress. The PES-A provides interoperability between key data processing installations of the Army's Personnel Community; the Total Army Personnel Command (PERSCOM), Army Reserve Personnel Command (AR-PERSCOM), Army Recruiting Command (USAREC), National Guard Personnel Center (NGPERCEN), and the Military Entrance Processing Command (MEPCOM), a Joint command for which the Army is the executive agent. It has been the cornerstone of the Army's personnel automation capability required to support emerging systems through the late 1990's and beyond. It fits into the Army Enterprise Strategy, supporting the modernization of Power Projection Platforms. FY 01 funding will buy automation infrastructure, communications capability, and system modeling to support the personnel community consolidation initiative and distributed capabilities. Continued implementation of PES-A will be a major step toward providing information as a force multiplier and integration of the Army's personnel community, with emphasis on system interoperability and the Total Army Personnel Data Base, permitting integration of Active, Reserve, Civilian, and Army National Guard systems.

Exhibit P-40C Budget Item Justification Sheet		Date February 2000
Appropriation / Budget Activity/Serial No. OTHER PROCUREMENT 12 / Communications and Electronics Equipment	P-1 Item Nomenclature PERSONNEL AUTOMATION SYSTEMS (BE4164)	
Program Elements for Code B Items	Code	Other Related Program Elements
<p>(continued)</p> <p>USMEPCOM JOINT COMPUTER CENTER (JCC): A memorandum of understanding between DoD and Selective Service System (SSS) formalized the establishment of the JCC where automatic data processing resources can be shared by USMEPCOM and SSS. The JCC mission includes the management and enhancement of shared resources, in full support of USMEPCOM and SSS peacetime and mobilization mission requirements. FY 01 funds will procure new technology cartridge tape drive systems, high speed printers, direct access storage devices (DASD), and the IBM OS/390 Operating System software which supports USMEPCOM and SSS peacetime processing requirements. The funds will also procure a front-end communications processor and a relational data base management software system. All acquired new technology DASD replace obsolete DASD equipment and also provide additional space for the users processing requirements.</p> <p>US MILITARY ACADEMY (USMA) INFORMATION MANAGEMENT ARCHITECTURE (IMA) MODERNIZATION: The USMA is an accredited institution of higher learning. To maintain its accreditation standards and to instruct/prepare future Army leaders to operate in the sophisticated high-tech warfare depicted in Joint and Army Visions for 2010 and beyond, it must employ in its classrooms/laboratories the latest technology/instructional tools. FY 01 funds will buy hardware and software to support technology infrastructure systems essential to every aspect of education, training, and command and control of the USMA and West Point. These include the data and telecommunications backbone networks, enterprise automation systems, digital document imaging systems, computer labs, upgraded classroom information technology, and shared automation facilities and resources that are critical to the mission of the USMA.</p> <p>US MILITARY ENTRANCE PROCESSING COMMAND (USMEPCOM) INTEGRATED RESOURCE SYSTEM (MIRS): The purpose of MIRS is to provide the automation and communications capability for USMEPCOM to meet its peacetime, mobilization and wartime military manpower accession mission for the Armed Services. The MIRS will interface with recruiting capabilities for all services, incorporating the concept of electronic data sharing using standard DoD data elements between USMEPCOM and all the Armed Services recruiting commands, greatly reducing redundant data entry. MIRS continues to improve Military Entrance Processing Stations (MEPS) operations by automating functions previously done manually. This project also includes Computerized Adaptive Testing-Armed Services Vocational Aptitude Battery (CAT-ASVAB), the automated version of the Armed Services Vocational Aptitude Battery (ASVAB) test given to determine applicants mental abilities. FY01 funding will continue to purchase memory to allow interface with additional DoD and service MEPS and in turn improve operations in those MEPS. FY01 funds begin replacement of MIRS infrastructure at all 65 MEPS throughout the United States.</p> <p>DEFENSE CIVILIAN PERSONNEL DATA SYSTEM MODERNIZATION (DCPDS-MOD): Army DCPDS MOD effort will support the standardization of business processes in the Civilian Personnel functional area and regionalization of Civilian Personnel Offices. DCPDS MOD procurement expenditures provide automation infrastructure to support fielding of this DoD-wide system to Army activities receiving the DCPDS MOD capability. Automation infrastructure fielded to Army activities will consist of Open System Environment (OSE) compliant data and process servers, user workstations, system peripherals, communications infrastructure, and Commercial Off the Shelf (COTS) software, (operating system, DBMS, office automation, etc.) fielded to ten Army Regional Service Centers (RSCs) and more than 100 subordinate installation level Customer Support Units (CSUs). Army automation infrastructure will be compatible with the DoD DCPDS MOD application software and integrate with the OSE architecture at Army sustaining base sites. Procurement strategy makes maximum use of existing contracts. This effort is projected to improve DoD-wide productivity over 30% in the civilian personnel management functional area in order to accommodate reductions already applied to outyear Army Budget. The initial DCPDS-MOD infrastructure acquisition concluded in FY99. FY00 funds supported life cycle infrastructure replacement of the first two (of ten) Army RSCs and subordinate installation level CSUs. FY01 funds support life cycle replacement of the next two Army RSCs and subordinate installation level CSUs. FY01 funds will also support enhancements to the Army automation baseline to optimize Army infrastructure to support the objective DCPDS-MOD software which will achieve full operational capability in April 00. Infrastructure will be replaced based on a five year life cycle.</p>

<p>(continued)</p> <p>ARMY RECRUITING INFORMATION SUPPORT SYSTEM (ARISS): The ARISS program is an Army specific acquisition to provide powerful laptop computers to Army recruiters. Efforts will continue to deploy these computers along with implementation of recruiting automation enhancements. These enhancements include laptop-based Enlistment Packet Projection and Recruiting Leads capabilities. ARISS also includes a recruiting Headquarters Support System to modernize recruiting headquarters business processes, improving management of recruiters and potential recruits. In addition, ARISS will provide enhanced automation capabilities to support Army Guidance Counselors at Military Entrance Processing Stations (MEPS). To date ARISS has deployed 7,600 laptops with a multimedia Army Sales Presentation capability and Enlistment Packet Projection capability. Deployment of remaining ARISS capabilities will take place in FY00/01. ARISS will interface with or be integrated into the Defense Integrated Military Human Resources System (DIMHRS) when DIMHRS is implemented. The system will support business process improvements in the recruiting functional area and will be fielded to all levels of the Army recruiting structure. ARISS will aid the Army to meet new accession goals in an era of dwindling resources and a shrinking pool of potential applicants for military service. The ARISS data structures is based upon DoD standard data elements and the system is compliant with the Joint Technical Architecture (JTA) and the Defense Information Infrastructure Common Operating Environment (DIICOE). ARISS has provided Army recruiters with powerful laptop computers to assist them in marketing the Army to potential recruits. Future increments will include critical functionality required by the field recruiters to perform total recruiting operations. The system also automates administrative tasks, freeing recruiters to concentrate on direct recruiting efforts. Completed ARISS capabilities (Sales Presentation and Packet Projection modules) have been certified Y2K compliant. FY01 OPA funds will procure laptop computers, servers, data warehouse hardware and other system-wide support automation infrastructure to support fielding of ARISS applications software.</p>

DESCRIPTION: This budget line funds automation initiatives that support transportation, cargo movement, and resupply under the Army Strategic Mobility Program (ASMP), begun in part as a result of lessons learned from Operation Desert Shield/Storm and the Congressionally mandated Mobility Requirements Study (MRS). The Army is changing its warfighting strategy from a forward deployed force to a Continental United States (CONUS) based force capable of rapid deployment worldwide. At the center of this strategy of rapid force movement are a number of transportation automated systems that facilitate/expedite force movement and resupply. The line also funds automation initiatives that support hazardous substance and food management programs.

JUSTIFICATION:

WORLDWIDE PORT SYSTEM (WPS): WPS is a Military Traffic Management Command (MTMC) automated information system (AIS) initiative essential to effective force projection and in-transit visibility of unit and sustainment cargos. At the center of the new Army strategy for rapid power projection to meet unspecified threats, WPS is one of several systems that provide movement control support to the Army Strategic Mobility Program, initiated as a result of lessons learned from Operation Desert Shield/Storm and the Congressionally mandated MRS. When fully fielded, WPS will support MTMC ocean terminals, US Navy port activities worldwide, FORSCOM Reserve Component Transportation Terminal Units, and Active Component Automated Cargo Documentation Detachments with worldwide warfighting support missions. Compact and transportable, WPS substantially increases the ability of the Defense Transportation System to provide in-transit visibility information to the warfighting CINCs and USTRANSCOM, while reducing the personnel required to operate the system and the transportation required to deploy the system to remote places. WPS will replace four aging AISs that support ocean terminal management and cargo documentation missions during peace and war. The replaced AISs include the obsolete Terminal Management System in CONUS, and the Army Standard Port System - Enhanced, whose significant deficiencies were identified during Operation Desert Shield/Storm. FY 01 funds buy hardware and software to continue fielding WPS to selected sites.

(continued)

AUTOMATED AIR LOAD PLANNING SYSTEM (AALPS): AALPS is a knowledge based "expert system" that assists users with aircraft planning. AALPS uses an artificial intelligence methodology to load plan for aircraft in near real time. The system takes data input of equipment and personnel, establishes gross load planning information, and quickly produces fully executable (certified) load plans for either a single mission, brigade sized deployment or multiple division sized airlift. AALPS is an approved migration system, and though it is a joint system, the Army is designated as the proponent, responsible for developing, implementing and fielding it to the services. FY01 funds will be used to purchase hardware and software for Army users, supplying them with a deployable automated platform for developing load plans and manifests, which will be used in air deployments and in determining airlift requirements during contingency planning operations. Fielding sites are Ft Bragg, Ft Campbell, Ft Stewart, Ft Drum, Ft Hood, Ft Lewis, United States Army Europe (USAREUR), Schofield Barracks, Ft Eustis, Ft Bliss, Ft Riley, Ft Sill, Ft Carson, Ft Richardson, Ft Polk, Ft Irwin, Ft Huachuca, Ft Lee, Ft McCoy, Ft McPherson, and Ft Dix.

INTEGRATED COMPUTERIZED DEPLOYMENT SYSTEM (ICODES): ICODES is being developed as a single standard common user stow planning system to meet DoD worldwide requirements. ICODES is a Military Traffic Management Command (MTMC) initiative, applying the principles of artificial intelligence to the function of planning loads and stowage of cargo and equipment aboard ocean vessels. ICODES will dramatically reduce the time (from 12 hours to under 30 minutes) and improve the accuracy of the ship stow planning process, enabling the user to concentrate on complex problems associated with port management and vessel loading. ICODES will support rapid deployment missions, planning cargo deployments from multiple seaports of embarkation and debarkation, as well as multiple ships. ICODES will also detail a three dimensional representation of the ship compartments, resolving the height limitations of the current system. Benefits from this system include: replacement of the current autonomous and redundant systems; improved responsiveness to changes and contingencies; ability to direct transfer stow plan files; streamlined and standardized terminal cargo training support; more effective allocation of marine cargo resources; comprehensive report capability; more precise cargo stow plans; and increased productivity. FY 01 funds procure the hardware and software necessary to continue fielding to authorized users.

AUTOMATIC IDENTIFICATION TECHNOLOGY (AIT): AIT is a suite of technologies that enables the automatic capture of source data rapidly and accurately and transfer the data to Automated Information Systems (AISs) with little or no human intervention, thereby enhancing the ability to identify, track, document, and control deploying and redeploying forces, equipment, personnel and sustainment cargo. AIT will streamline the Military Traffic Management Command and Army logistics business process and enhance its warfighting capability. The AIT devices purchased, configured, and installed, will be integrated with other components of the DoD AIT infrastructure to improve interoperability. FY01 funds procure hand held readers and interrogators, business process servers for receiving, storing and forwarding AIT transactions and radio frequency identification tags.

ARMY FOOD MANAGEMENT INFORMATION SYSTEM (AFMIS): This program modernizes the current Army Food Management Information System (AFMIS). It includes improved business processes in food service operations, a point of sale capability, an automated headcount capability to support smart card technology, and an added decision support module to allow high level managers at installation, MACOM and HQDA to make better management decisions. Hardware will also be improved from the current AT&T 3B2 mini-computers and dumb terminal configuration to a Y2K compliant Windows NT client-server platform. FY 01 funds buy hardware and software for Army installations worldwide. The new platform will comply with the Army Technical Architecture (ATA) and Common Operating Environment (COE) standards. There are approximately 48 installations and a total of approximately 325 Dining Facilities throughout CONUS and Outside Continental United States (OCONUS). The modernized system will be utilizing Commercial Off The Shelf (COTS) software to manage inventory, purchasing & receiving, and recipe & menu planning. It will also provide labor and asset tracking and automate account status. The new hardware and software will be certified as Y2K compliant.

Program Elements for Code B Items	Code	Other Related Program Elements
<p>(continued)</p> <p>HAZARDOUS SUBSTANCE MANAGEMENT SYSTEM (HSMS): HSMS is a DoD software package designed to aid in the implementation of improved business practices for the management of hazardous material and hazardous waste at the installation level. The implementation of the improved management system results in an increase in operational readiness and cost savings in hazardous waste disposal. The readiness of the warfighting units is enhanced in several areas. First, the centralized management of hazardous materials decreases the soldier's requirements for many environmental related duties such as ordering, inventory control, issue and disposal and allows more time for maintenance of equipment and weapons and training. Second, these improved management practices reduce the inventory and thus the cost of hazardous materials to the TOE unit allowing more funds for training and other missions. Third, centralized management also allows for the rapid preparation of deployment loads and packages. The new system also monitors the shelf life of required hazardous materials needed for training and/or deployment thus reducing the time for the preparation of these deployment loads and the possibility of having to use expired items during training or deployment. And finally, the centralized management practices allow for the use of hazardous materials only by authorized personnel who are trained and equipped for these operations. Health and safety risks to the unit are reduced as well as the environmental liability of the commander. All of these benefits enhance the capability of units to train and deploy to meet the mission needs of the Total Army. The Army has fielded the improved management system and software to 41 installations to date and plans to field to approximately 80 installations. To date the improved system has resulted in improved operational unit readiness and cost savings or cost avoidances in the following areas: hazardous material purchased, and hazardous waste disposal cost. FY 01 funds buy automation hardware (computers, printers, bar code scanners and servers) for the fielding of the HSMS software system to Army installations worldwide.</p>

DESCRIPTION: The Joint Computer-Aided Acquisition and Logistics Support (JCALS) system provides an infrastructure capable of integrating digitized technical data that supports the weapons systems acquisition and logistics life cycle. The system is data driven and provides an automated information systems architecture, independent of application. JCALS will initially meet the Services' goal of automating technical manual processes and functions. The JCALS architecture provides a distributed, open systems environment that makes extensive use of both industry and Government standards. The architecture is designed for flexibility and growth, and is capable of accommodating additional system requirements, technological improvements and new functionality. The initial application being fielded is Joint Technical Manuals.

At the JCALS sites, hardware and software configurations are dependent on each site's organization and functions, processing needs and role in the overall system. The system provides local and wide area communications processing, distributes, manages, updates and replicates data throughout the system and delivers the applications and functions to the users' workstations. The system architecture includes a central site for user support, system monitoring, life cycle software support, maintenance and troubleshooting.

JUSTIFICATION: FY 01 funds support deployment of the JCALS capability to high priority Technical Manual users at approximately 51 Joint Service sites. The DoD approved site list is extensive, including service depots, installations and schools. FY01-05 funding profile reflects realignment from OMA to OPA appropriations.

DESCRIPTION: The Reserve Component Automation System (RCAS) is an automated system that will provide the Army the capability to more effectively administer, manage, and mobilize Army National Guard and Army Reserve forces. The RCAS will link over 10,500 Guard and Reserve units at over 4,000 locations. The RCAS will support daily operational, training and administrative tasks at all Guard and Reserve echelons, and will provide timely and accurate information to plan and support mobilization. The RCAS is an Acquisition Category IAM program managed by the Chief, National Guard Bureau. The RCAS project was restructured in FY95 to constrain cost growth, establish a realistic requirements baseline, and leverage new information management technology. The redesigned system consists of Commercial-Off-The-Shelf (COTS) hardware and office automation software, Government-Off-The-Shelf (GOTS) software, and new software applications integrated into an open systems, PC-based architecture. The RCAS Mission Needs Statement was re-validated 5 March 1996. Program goals and functional requirements are described in the RCAS Operational Concept Description, April 1996.

JUSTIFICATION: The restructured project approach was approved by the RCAS General Officer Steering Committee, the OSD MAISRC and Congress, September 1996. On 23 September 1996 a joint DOD/DA Overarching Integrated Process Team chaired by OSD (C3I) approved Increment One fielding. Increment One, the RCAS infrastructure of COTS hardware/software products, provides the user with immediate capability to meet unit administration, mobilization and communication needs. Future increments, defined in a "rolling wave," evolutionary process, will satisfy user-validated requirements in the order of priority established by the Army National Guard and Army Reserve. Increment Two introduced data servers and logistics functionality associated with GOTS software (e.g., Standard Property Book System-Redesign) and addressed initial software encryption requirements. Increment Three, scheduled for deployment in FY00, will introduce force authorization, training, human resources functionality and the second phase of software encryption requirements. Increment Four will deliver logistics, occupational health, training and personnel functionality in FY00. Increments Five and Six, scheduled for FY01, will complete all remaining functionality such as occupational health, safety, aviation safety, risk management, force modernization, database expansion, resource management and hosting the GCSS-Army Tier 1.

DESCRIPTION: The Armed Forces Radio and Television Service (AFRTS) provides American language broadcast services to DoD personnel and family members stationed overseas. AFRTS is the only mass communications support to overseas warfighting Commanders-in-Chief (CINCs) for dissemination of emergency, safety and command information during peacetime, wartime and Operations Other Than War (OOTW). AFRTS facilities operate 24-hours per day to broadcast radio and television programming to nearly 500,000 soldiers, sailors, airmen, marines, DoD civilians and family members in accordance with DoD Directive 5122.10. Overseas wartime operational CINCs consider AFRTS a "combat multiplier" and essential "quality of life" issue for maintaining and enhancing the morale, readiness, and well-being of overseas troops, DoD personnel and their families. AFRTS service has become increasingly important for dissemination of timely information as the Army shifts resources in support of contingency, peacekeeping and wartime operations. Congress mandates that AFRTS provide the same type of radio and television service to personnel deployed overseas that is available to American citizens in the United States.

JUSTIFICATION: FY 01 funds purchase Commercial Off The Shelf (COTS) broadcast transmitters and electronic news production systems to sustain AFRTS broadcast operations. Failure to fund these systems will reduce AFRTS capability to sustain mission support for full spectrum contingency operations such as Croatia, Hungary, Macedonia and Bosnia, and deny warfighting CINCs the critical AFRTS resources to execute wartime and contingency/emergency information needs in a timely manner. In addition to health, safety and quality of life issues, "Observations and Lessons Learned, Operation Desert Storm," validated AFRTS as a force multiplier and Battlefield Support Agency. AFRTS, through its primary mission of command information, serves as an information conduit for the battlefield commander. The mass communications broadcast mission of AFRTS is not duplicated by the strategic communication mission of the Army or other services and is the only means of direct communication from the President of the United States to US deployed forces. Overseas force reductions, force realignment, post-Conventional Forces Europe (CFE), troop strength reductions in Korea and overseas base closures have been considered and do not impact the equipment required to sustain the basic broadcast capability.

DESCRIPTION: This budget line supports Visual Information (VI) processes for all MACOMs and Headquarters, Department of the Army (HQDA) Field Operating Agencies (FOAs). Department of Defense (DoD)/Army authorized VI activities provide audio-visually-based products and services to support Army-wide training and readiness, force development, mobilization, health, safety, and documentation of diagnostics for medical, historical, and professional information. VI support includes imagery for installation power protection platforms, video productions (especially for Military Occupational Specialty (MOS) training and readiness, safety and intelligence), electronic imaging, and photography (including DA official photos). VI equipment provides commanders with video, photography, electronic imaging, audio, and other computer generated media which can be integrated to convey real time, two-way information throughout the chain of command.

All equipment has been approved for purchase through the requirements process and included in the Visual Information Systems Program (VISIP). The VISIP is the only means for commanders to procure, replace or augment their VI investment systems and equipment. The equipment in the VISIP has been reviewed and prioritized, both by MACOMs, and HQDA, Director, Information Systems for Command, Control, Communications and Computers (DISC4). These funds are in support of The Army Plan SEC VII, Para J3b(4), "Obtain a family of information systems to meet the needs of all disciplines ... developed in the context of approved information models and architecture." Funds will purchase equipment to support the transition to electronic imaging (away from hazardous chemical processes) and replace equipment past its life cycle for commanders at each post, camp and station, plus HQDA, Office of the Joint Chiefs of Staff, Office of the Secretary of Defense, and other government agencies in the National Capital Region, as well as the U.S. Military Academy, National Defense University CAPSTONE course, Training and Doctrine Command (TRADOC) schools, and the National Guard and Army Reserves training.

JUSTIFICATION: FY 01 funds provide VI equipment for Army elements to directly support the warfighter. The equipment to be purchased is listed in the associated FY VISIP acquisition sequence. Funds will acquire replacement VI investment equipment/systems to produce training materials and other VI products to support the warfighter. Existing equipment is obsolete, requiring excessive maintenance dollars and long inefficient "throughput" times.

DESCRIPTION: This program provides funding to establish, modernize, expand or replace Army-owned industrial facilities used in production testing of communications and electronic materiel. It sustains Army production test capabilities through upgrade and replacement of instrumentation and equipment that is technologically and/or economically obsolete. Modernization of test instrumentation and equipment generally provides increased automation and efficiencies, improved data quality and quantity and cost avoidances to Army Program Managers. FY2000 includes \$2.5M added by Congress for the Industrial Operations Facility at Tobyhanna Army Depot.

JUSTIFICATION: FY01 and FY02 funding is required for replace communication emitter systems and upgrade position location equipment at the Electronic Proving Ground (EPG), Fort Huachuca, AZ. Communications emitters will be capable of transmitting and receiving different radio signal modulation types for complete testing of Intelligence and Electronic Warfare (IEW) systems and Command, Control and Communications equipment. These emitter systems will provide EPG the means to conduct realistic field testing, enhancing current capabilities by providing an up-to-date threat array. This array will provide realistic dispersion of targets in accordance with current intelligence and order of battle of known threats. EPG requires this instrumentation to test and stress communications and electronic equipment to their full capabilities, providing authentic threat signatures, modulation wave forms and frequency spectrums. Global Positioning System transponders will allow multiple target tracking for testing position location systems and for position identification during communications and IEW tests. This instrumentation is essential for test officers at the Instrumented Test Range to verify the actual location of multiple test items during pre-test, test and post-test and to provide real-time feedback of location during the test.
